

February 5, 2009

The Airflex division of Eaton manufactures a variety of industrial clutches, brakes, and assemblies for heavy equipment. When used as intended and under normal operating conditions, the products manufactured by Airflex meet the Occupational Safety and Health Administration (OSHA) definition of an article and are exempt from the Hazard Communication Standard.

Friction materials may contain the resin bonded ingredients outlined below:

- Synthetic Fibers
- Cellulose Fibers
- Iron Fiber/Powder
- Glass Fibers
- Diatomaceous Earth
- Carbon Fibers
- Nitrile Elastomers
- Barium Sulfate
- Graphite
- Brass
- Barite
- Calcium Hydroxide
- Iron Oxide
- Aluminum Oxide
- Phenolic Resin

The exact compositions and percentages of ingredients are considered proprietary information by the various friction material suppliers. The friction materials used in our products do not contain asbestos.

A potential for contact to dust exists when performing activities such as grinding, drilling or sanding on friction material components. Such activities are not considered to be a normal operating condition. In such situations ventilation or respiratory protection measures may need to be considered in accordance with good industrial hygiene practices.
