Subject: Introducing the new 540C Battery Cabinets offering increased power density!

New 540 Watt battery replaces 500 Watt (500C cabinet configurations) to provide more run time at the same price

All 500W battery cabinet configurations have now been replaced with the new 540W battery.

The new CSB HRL12540W battery has the same dimensions and weight as the existing CSB produced Eaton PWHR12500WFR battery used in the “500C” configurations, but offers approximately 8% additional power at the 15 minute rate. Run time performance with small UPS and/or light loads over long durations is equivalent to the 500W battery.

The 500W battery is still being produced and will be available for service replacements.

Part numbers and Pricing

Revised July price lists include the new part numbers.

Availability

Available in stock. Any new customer orders for 500C battery cabinets should be entered using the new 540C part numbers.

Sales Tools

Updated battery run time charts and battery cabinet look up charts for 9X55, 93E and 93PM are now available on the Salesweb extranet.
