Eaton completes 93PM UPS offering with new 400V models

Eaton is announcing the completion of its scalable and efficient [93PM UPS](#) series with the release of 400V models. With this final step, the 93PM now offers a complete solution to replace the Eaton 9390 UPS. As announced in October 2018, the 9390 UPS is now an end-of-life product for general purchasing. Please refer to previous sales bulletin for more information on this transition.

The 400V models of the 93PM UPS serve customers searching for efficiency and cost savings, allowing customers to directly support 230V server systems without the need for downstream PDUs.

The UL listed 400V models are manufactured in Raleigh, N.C.
