Phase-out of products affected by launch of the Eaton 9PX 2-3 kVA RT UPS
End-of-life (EOL) transition for the Americas effective October 21, 2016

On June 28, 2016, Eaton announced the release of the Eaton 9PX 2-3 kVA RT UPS. The launch of this UPS redefines Eaton's position in this power range and provides industry-leading features in capacity, efficiency and usability. The 9PX will replace the 9130 2-3 kVA rackmount and EX UPS models. Eaton understands that this decision has an impact on existing customers and will strive to make the transition as easy as possible. The tables below outline lists of the products being phased out as part of the recent 9PX launch.

Customers requiring current products for scheduled rollouts should consult with their local Eaton sales representative as quickly as possible. Eaton will work with customers to come up with strategies to ease the product transition on a case-by-case basis.

Eaton will make best efforts to maintain product inventory based upon historical run rates through October 21, 2016, but cannot guarantee availability. Orders will be honored on a first come, first served basis.

For information on the affected models and direct replacement products, please see the tables below:
