Effective February 2023 Supersedes October 2021

180D 1500 V d.c. Flush end high speed fuse links

Product description

Eaton's Bussmann series flush end mounted 180D 1500 V d.c. range of high-speed square body fuses are specifically designed to provide DC short circuit over current protection for a variety of applications including, DC to AC inverters used as part of Battery Energy storage systems (BESS), DC common bus systems, regenerative drives and rectifiers.

BUSSMANN

SFRIFS

Features

- · 1500 V DC Voltage rating
- · Low watts loss for energy efficiency
- Tested to 10 ms Time constant (suitable for most DC applications)
- · Fast acting aR type protection
- Visual blown fuse indication as standard
- Optional microswitch indication available

Applications

- · DC to AC Inverter protection
- · DC to DC Converters
- Battery storage applications
- Electric Vehicle charging stations
- Power conversion systems
- Regenerative drives
- DC Common bus system

Technical Data TD135006EN

Effective February 2023

Catalogue symbol

• 180D7xxx

Fuse body size

• 4

Technical data

- Rated voltage: 1500 V d.c.
- · Rated current: 800 A to 1800 A
- · Class of operation: aR
- Breaking capacity: 100 kA
- Time constant: 10 ms

Standards/Approvals

Designed and tested to IEC 60269 Part 4

- CE
- · UL 248-13 Recognised
- RoHS compliant

Packaging

• 1

Compatible microswitch

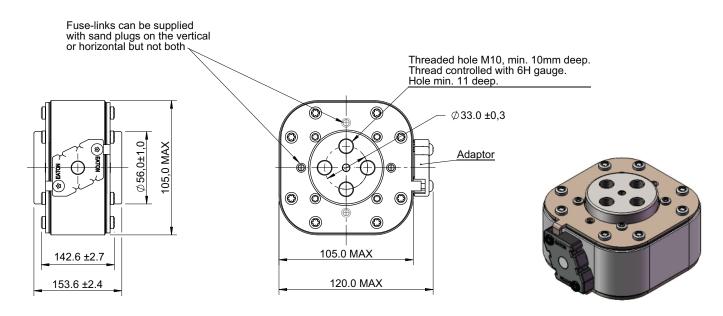

· 170H0069

Table 1. Technical data

	Rated current (A)	Rated voltage (V d.c.)	Energy integrals I ² t (A ² s)			Watts loss
Fuse link body size			Pre-arcing at 1500 V d.c.	Clearing at 1500 V d.c.	Minimum breaking current (A) 1500 V d.c.	In

Time current curve

Technical Data TD135006EN Effective February 2023

Total clearing curve

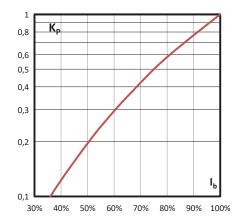

The total clearing I^2t at rated voltage and tested DC time constant are given in electrical characteristics. For other voltages the clearing I^2t is found by multiplying by correction factor, K, given as a function of applied working voltages, E_n .

180D 1500 V d.c. Flush end high speed fuse links

Watts losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the watts losses at load currents lower than the rated current. The correction factor, K_p , is given as a function of the RMS load current, I_b , in percent of the rated current.
