Re: AFCI Indicators

To Whom It May Concern:

Given the common availability of AFCI indicators in the marketplace and the subsequent use in determining the functionality of AFCI, concerns have arisen as to the reliability of such devices.

It is understood that such devices cannot produce an actual arc fault and are intended for indication only. These devices may not truly reflect the actual condition of the AFCI as changes to AFCI technology often make current indicators obsolete.

It is thus recommended that the testing instructions provided by the manufacturer of the AFCI be followed in the event of any doubt.

Respectfully submitted,

Tim Evans
