

Cable limiters

Protect cables against short-circuit currents while increasing system reliability

Designed for the protection of low voltage distribution networks and service entrance cables.

Product description:

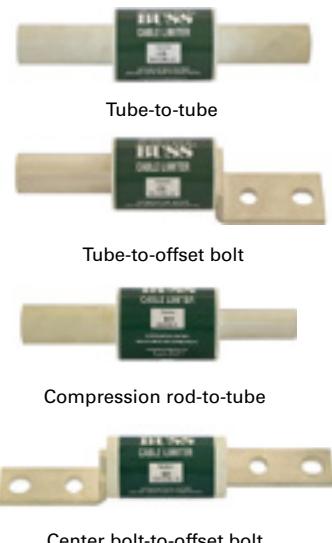

Eaton's Bussmann® series cable limiters provide short-circuit protection to electrical systems, typically between the transformer and service entrance. Bussmann series cable limiters remove the affected cable(s) from service and permit the other conductors to continue delivering power.

Rated at 250Vac for conductors 2/0AWG to 600kcmil and 600Vac for conductors 12AWG to 1000kcmil, cable limiters are available for many applications.

Features and benefits:

- Available with tube-to-tube (crimp), tube-to-bolt (crimp/bolt-in), compression rod-to-tube and center/offset bolted terminal options, which allows installation in various applications.
- To help achieve code compliance KCD, KCJ, KCM, KCR, KDM, KDR Bussmann series cable limiters are UL Listed for use on 600V circuits for the protection of faults up to 200kA.
- Cable limiters isolate the fault to one or more conductors and only the affected cable is removed from service by the cable limiter, permitting convenient scheduling of repairs.
