

# Automotive-grade Class D molded-alloy and ferrite dual inductors

Eaton ACDL is a complete family of automotive-grade Class D dual inductors consisting of ACDL1V (molded-alloy construction) and the ACDL2V (ferrite construction).

### Product description

Eaton ACDL is a complete family of automotive-grade Class D dual inductors consisting of ACDL1V (molded-alloy construction) and the ACDL2V (ferrite construction). The ACDL1V's molded construction is ideal for high currents requiring soft inductance saturation and performance stability over a wide temperature range, while the ACDL2V's ferrite construction offers high efficiency and low DCR. Moreover, the high power density of Eaton's ACDL1V/ACDL2V inductors allow automotive engineers to increase Class D amplifier sound quality while achieving greater efficiency (due to less heat) and taking up less space. Both ACDL1V/ACDL2V are magnetically shielded for EMI immunity in electronic applications.

### Features and benefits

- Molded (ACDL1V) and ferrite (ACDL2V) constructions for a wide range of audio Class-D filtering performance options
- Wide inductances range; from 4.7  $\mu\text{H}$  to 33  $\mu\text{H}$ ; ACDL1V (5.6  $\mu\text{H}$  to 33  $\mu\text{H}$ ) and ACDL2V (4.7  $\mu\text{H}$  to 22  $\mu\text{H}$ )
- High power density
- EMI shielded construction
- Robust molded and ferrite construction
- Wide operating temperature range
- AECQ-200
