Pressure Filter Series HP3.600-1350 DN50 PN420

Description:

Pressure filter series HP3.600-1350 have a working pressure up to 420 bar. Pressure peaks can be absorbed with a sufficient safety margin. The HP3-filters are flange mounted to the hydraulic system.

The filter element consists of star-shaped, pleated filter material, which is supported on the inside by a perforated core tube and is bonded to the end caps with a high-quality adhesive. The flow direction is from outside to inside. Filter elements are available down to 5 $\mu m_{(c)}$. Finer filtration is available upon request.

For cleaning the stainless steel mesh element (see special leaflets 21070-4 and 39448-4) or changing the filter element, remove the pipe plug and take out the element. The mesh elements are not guaranteed to maintain 100% performance after cleaning.

Eaton filter elements are known for high intrinsic stability and an excellent filtration capability, a high dirt-retaining capacity and a long service life.

Eaton filter elements are available up to a pressure resistance of Δp 160 bar and a rupture strength of Δp 250 bar.

Eaton filter can be used for petroleum-based fluids, HW emulsions, water glycols, most synthetic fluids and lubrication fluids. Consult factory for specific fluid applications.

The internal valves are integrated into the centering pivot for the filter element. After reaching the opening pressure the by-pass valve causes that an unfiltered partial flow passes the filter.

The reversing valve provides another level of protection for the filter element. The reverse flow will not be filtered.

1. Type index:

1.1. Complete filter: (ordering example)

		10VG.									
1	2	3	4	5	6	7	8	9	10	11	12

1 series

HP3 = pressure filter

2 nominal size: 600, 900, 1350

3 filter material:

80G, 40G, 25G stainless steel wire mesh 25VG, 16VG, 10VG, 6VG, 3VG microglass

4 | filter element collapse rating:

30 = ∆p 30 bar

HR = Δp 160 bar (rupture strength Δp 250 bar)

5 **filter element design**:

E = single-end open

6 sealing material:

P = Nitrile (NBR)

= Viton (FPM)

7 filter element specification:

- = standard VA = stainless steel

IS06 = for HFC application, see sheet-no. 31601

8 process connection:

FS = SAE-flange connection 6000 PSI

9 process connection size:

8 = 2"

10 filter housing specification:

= standard

IS06 = for HFC application, see sheet-no. 31605

11 internal valve:

- = without

- S1 = with by-pass valve Δp 3,5 bar
- S2 = with by-pass valve Δp 7,0 bar
- R = with reversing valve, $Q \le 465,348$ l/min

12 clogging indicator or clogging sensor:

- = without

- AOR = visual, see sheet-no. 1606
- AOC = visual, see sheet-no. 1606
- AE = visual-electric, see sheet-no. 1615
- VS5 = electronic, see sheet-no. 1619

To add an indicator/sensor to your filter, use the corresponding indicator data sheet to find the indicator details and add them to the filter assembly model code.

1.2. Filter element: (ordering example)

		10VG.				
1	2	3	4	5	6	7

1 series:

01E. = filter element according to company standard

2 nominal size: 600, 900, 1350

3 - 7 see type index-complete filter

.

Technical data:

operating temperature: operating medium: max. operating pressure: test pressure: process connection: housing material: sealing material: installation position: -10°C to +100°C mineral oil, other media on request 420 bar 600 bar SAE-flange 6000 PSI EN-GJS-400-18-LT, C-steel (filter pipe/plug) Nitrile (NBR) or Viton (FPM), other materials on request vertical

Classified under the Pressure Equipment Directive 2014/68/EU for mineral oil (fluid group 2), Article 4, Para. 3. Classified under ATEX Directive 2014/34/EU according to specific application (see questionnaire sheet-no. 34279-4).

Pressure drop flow curves:

Filter calculation/sizing

The pressure drop of the assembly at a given flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

 Δp assembly = Δp housing + Δp element Δp housing = (see $\Delta p = f(Q)$ - characteristics)

$$\Delta p \text{ Element (mbar)} = Q \left(\frac{l}{min}\right) x \frac{MSK}{10} \left(\frac{mbar}{l/min}\right) x v \left(\frac{mm^2}{s}\right) x \frac{p}{0.876} \left(\frac{kg}{dm^3}\right)$$

For ease of calculation our Filter Selection tool is available online at: www.eaton.com/hydraulic-filter-evaluation

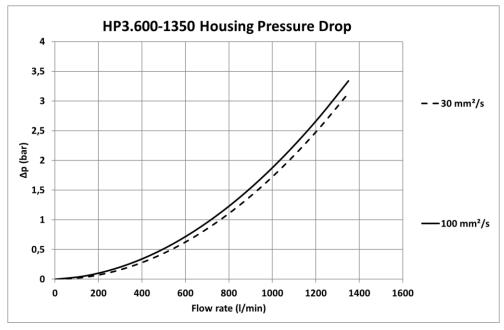

Material gradient coefficients (MSK) for filter elements

The material gradient coefficients in mbar/(l/min) apply to mineral oil (HLP) with a density of 0,876 kg/dm³ and a kinematic viscosity of 30 mm²/s (139 SUS). The pressure drop changes proportionally to the change in kinematic viscosity and density.

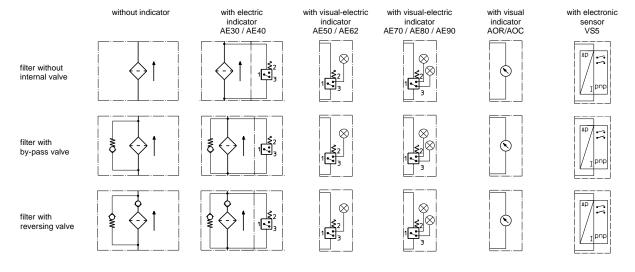

HP3	VG				G			
	3VG	6VG	10VG	16VG	25VG	25G	40G	80G
600	0,776	0,539	0,345	0,300	0,205	0,0247	0,0231	0,0158
900	0,538	0,374	0,239	0,208	0,142	0,0155	0,0144	0,0099
1350	0,336	0,233	0,149	0,130	0,089	0,0100	0,0093	0,0064

<u>∆p = f(Q) – characteristics according to ISO 3968</u>

The pressure drop characteristics apply to mineral oil (HLP) with a density of 0,876 kg/dm³. The pressure drop changes proportionally to the density.

Symbols:

Spare parts:

item	qty.	designation	dimension			article-no.		
			HP3.600	HP3.900	HP3.1350			
1	1	filter element	01E.600	01E.900	01E.1350			
2	1	O-ring	98 x 4			301914 (NBR)	304765 (FPM)	
3	1	support ring	110 x 3,5 x 2			304	802	

Test methods:

Filter elements are tested according to the following ISO standards:

ISO 2941	Verification of collapse/burst resistance
130 2341	

- ISO 2942 Verification of fabrication integrity
- ISO 2943 Verification of material compatibility with fluids
- ISO 3723 Method for end load test
- ISO 3724 Verification of flow fatigue characteristics
- ISO 3968 Evaluation of pressure drop versus flow characteristics
- ISO 16889 Multi-pass method for evaluating filtration performance
