# Series HPF 60-450 DN18-28 PN315

Execution HPF 60-150

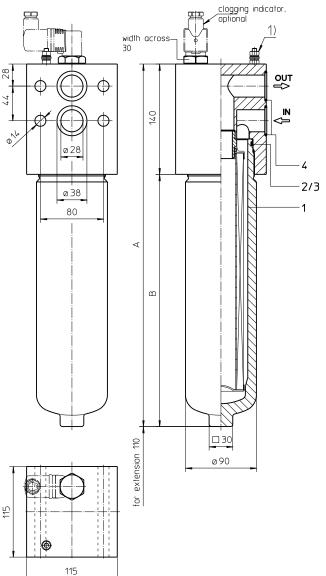

1) Connection for the potential equalization, only for application in the explosive area.

## **Dimensions:**

type	connection	А	В	weight	volume tank
HPF 60		218	122	5,5 kg	0,3 l
HPF 90	DN18	283	187	6 kg	0,4 I
HPF 150		392	296	7 kg	0,6 I
HPF 170		330	190	17 kg	0,7 l
HPF 240	DN28	380	240	18 kg	0,91
HPF 360		460	320	20 kg	1,2 l
HPF 450		565	425	23 kg	1,6 l

Execution HPF 170-450

Dimensions: mm

Designs and performance values are subject to change.

## Pressure Filter Series HPF 60-450 DN18-28 PN315

## **Description:**

Pressure filter series HPF 60-450 have a working pressure up to 315 bar. Pressure peaks can be absorbed with a sufficient safety margin. The HPF-filters are flanged to the mounting-surface.

The filter element consists of star-shaped, pleated filter material, which is supported on the inside by a perforated core tube and is bonded to the end caps with a high-quality adhesive. The flow direction is from outside to inside. Filter elements are available down to  $5 \ \mu m_{(c)}$ . Finer filtration is available upon request.

For cleaning the stainless steel mesh element (see special leaflets 21070-4 and 39448-4) or changing the filter element, remove the filter bowl and take out the element. The mesh elements are not guaranteed to maintain 100% performance after cleaning.

Eaton filter elements are known for high intrinsic stability and an excellent filtration capability, a high dirt-retaining capacity and a long service life.

Eaton filter can be used for petroleum-based fluids, HW emulsions, water glycols, most synthetic fluids and lubrication fluids. Consult factory for specific fluid applications.

Eaton filter elements are available up to a pressure resistance of  $\Delta p$  160 bar and a rupture strength of  $\Delta p$  250 bar.

The internal valves are integrated into the centering pivot for the filter element. After reaching the opening pressure the by-pass valve causes that an unfiltered partial flow passes the filter.

With the reverse valve a protection of the filter element is given when having a reverse flow inside the filter. The reverse flow will not be filtered.

## Type index:

## Complete filter: (ordering example)

		10VG.										
1	2	3	4	5	6	7	8	9	10	11	12	

#### 1 series:

- HPF = pressure filter, manifold mounted
- 2 **nominal size:** 60, 90, 150, 170, 240, 360, 450

#### 3 filter-material:

80G, 40G, 25G stainless steel wire mesh 25VG, 16VG, 10VG, 6VG, 3VG microglass

#### 4 filter element collapse rating:

- 30 = ∆p 30 bar
  - HR =  $\Delta p$  160 bar (rupture strength  $\Delta p$  250 bar)
- 5 filter element design:
- E = single-end open

#### 6 sealing material:

- P = Nitrile (NBR)
- V = Viton (FPM)

#### 7 filter element specification:

- = standard VA = stainless steel
- IS06 = for HFC applications, see sheet-no. 31601

#### 8 process connection:

= manifold mounted

#### 9 process connection size:

- 4 = DN18 (HPF 60-150)
  - = DN28 (HPF 170-450)

## 10 | filter housing specification:

- = standard
  - IS06 = for HFC applications, see sheet-no. 31605

#### 11 internal valve:

5

- = without
- S1 = with by-pass valve  $\Delta p$  3,5 bar
- S2 = with by-pass valve  $\Delta p$  7,0 bar B = reversing valve  $\Omega < 70.06$  l/m
  - = reversing valve, Q  $\leq$  70,06 l/min (HPF 60-150) Q  $\leq$  211,008 l/min (HPF 170-450)

 $Q \le 211,000$  //min (1111 170-40

#### 12 clogging indicator or clogging sensor:

- = without
- AOR = visual, see sheet-no. 1606
- AOC = visual, see sheet-no. 1606
- AE = visual-electric, see sheet-no. 1615
- VS5 = electronic, see sheet-no. 1619

To add an indicator/sensor to your filter, use the corresponding indicator data sheet to find the indicator details and add them to the filter assembly model code.

#### Filter element: (ordering example)

01E.	90.	10VG.	HR.	E.	Ρ.	-
1	2	3	4	5	6	7

1 series:

- 01E. = filter element according to company standard
- 2 **nominal size:** 60, 90, 150, 170, 240, 360, 450
- 3 7 see type index-complete filter

## **Technical data:**

operating temperature: operating medium max. operating pressure: test pressure: process connection: housing material: sealing material: installation position: -10°C to +100°C mineral oil, other media on request 315 bar 450 bar manifold mounted C-steel Nitrile (NBR) or Viton (FPM), other materials on request vertical

Classified under the Pressure Equipment Directive 2014/68/EU for mineral oil (fluid group 2), Article 4, Para. 3. Classified under ATEX Directive 2014/34/EU according to specific application (see questionnaire sheet-no. 34279-4).

## Pressure drop flow curves:

#### Filter calculation/sizing

The pressure drop of the assembly at a given flow rate Q is the sum of the housing  $\Delta p$  and the element  $\Delta p$  and is calculated as follows:

 $\Delta p$  assembly =  $\Delta p$  housing +  $\Delta p$  element  $\Delta p$  housing = (see  $\Delta p = f(Q)$  - characteristics)

$$\Delta p \text{ element (mbar)} = Q \left(\frac{l}{min}\right) x \frac{MSK}{10} \left(\frac{mbar}{l/min}\right) x V \left(\frac{mm^2}{s}\right) x \frac{p}{0.876} \left(\frac{kg}{dm^3}\right)$$

For ease of calculation our Filter Selection tool is available online at www.eaton.com/hydraulic-filter-evaluation

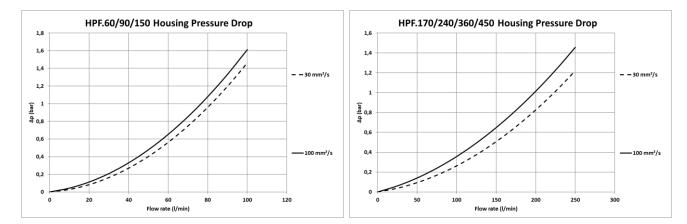

### Material gradient coefficients (MSK) for filter elements

The material gradient coefficients in mbar/(I/min) apply to mineral oil (HLP) with a density of 0,876 kg/dm<sup>3</sup> and a kinematic viscosity of 30 mm<sup>2</sup>/s (139 SUS). The pressure drop changes proportionally to the change in kinematic viscosity and density.

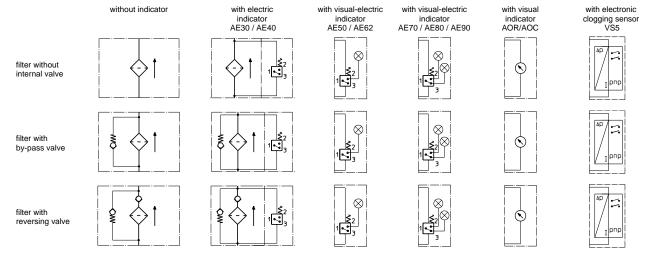

HPF		G						
	3VG	6VG	10VG	16VG	25VG	25G	40G	80G
60	5,438	3,775	2,417	2,104	1,438	0,2205	0,1635	0,1526
90	3,271	2,271	1,454	1,266	0,865	0,1333	0,0988	0,0922
150	1,952	1,355	0,867	0,755	0,516	0,0796	0,0590	0,0551
170	2,187	1,518	0,972	0,846	0,578	0,0685	0,0640	0,0438
240	1,685	1,170	0,749	0,652	0,446	0,0531	0,0496	0,0340
360	1,233	0,856	0,548	0,477	0,326	0,0388	0,0362	0,0248
450	0,907	0,630	0,403	0,351	0,240	0,0285	0,0266	0,0182

## <u>∆p = f(Q) – characteristics according to ISO 3968</u>

The pressure drop characteristics apply to mineral oil (HLP) with a density of 0,876 kg/dm<sup>3</sup>. The pressure drop changes proportionally to the density.

## Test methods:

Filter elements are tested according to the following ISO standards:

- ISO 2941 Verification of collapse/burst resistance
- ISO 2942 Verification of fabrication integrity
- ISO 2943 Verification of material compatibility with fluids
- ISO 3723 Method for end load test
- ISO 3724 Verification of flow fatigue characteristics
- ISO 3968 Evaluation of pressure drop versus flow characteristics
- ISO 16889 Multi-pass method for evaluating filtration performance
