Series DA 256 NPS 2" CLASS 150-300 PSI

Position I: Filter 1 in operation Position II: Filter 2 in operation

 Connection for the potential equalization, only for application in the explosive area.

Switch lever standard in the front.

2) On request:

The switch lever ca be moved to backside of the changeover valve,

Please specify this configuration on the order.

Assignment of connections and functions:

A: process inlet SAE 2" 3000PSI B: process outlet SAE 2" 3000 PSI

C1/C2: air bleeding NPT ½"
D1/D2: drain, dirt side NPT ½"
E1/E2: drain, clean side NPT ½"

F1: measuring connection G ¼ dirt side F2: measuring connection G ¼ clean side

G1/G2: air bleeding NPT ½" **H1/H2:** drain bottom NPT ½"

Weight: approx.110 kg

Dimensions: mm

Designs and performance values are subject to change.

Pressure Filter, changeover Series DA 256 NPS 2" CLASS 150-300 PSI

Description:

Pressure filter series DA 256 have a working pressure up to 40 bar. Pressure peaks can be absorbed with a sufficient safety margin.

A changeover ball valve between the two filter housings makes it possible to switch from the dirty filter side to the clean filter side without interrupting operation.

The filter element consists of star-shaped, pleated filter material which is supported on the inside by a perforated core tube and is bonded to the end caps with a high-quality adhesive. The flow direction is from outside to inside.

For cleaning the stainless steel mesh element (see special leaflets 21070-4 and 39448-4) or changing the filter element, remove the cover and take out the element. The mesh elements are not guaranteed to maintain 100% performance after cleaning.

For filtration finer than 40 μm use disposable elements made of microglass. Filter elements as fine as 5 $\mu m(c)$ are available; finer filter elements are available upon request.

Eaton filter elements are known for a high intrinsic stability and an excellent filtration capability, a high dirtretaining capacity and a long service life.

Eaton filter elements are suitable for all petroleum based fluids, HW-emulsions, most synthetic hydraulic fluids and lubrication oils.

Ship classifications available upon request.

Accessories:

- SAE-counter flanges, see sheet-no. 1652
- drain- and bleeder connection, see sheet-no. 1659

Technical data:

operating temperature: - 10°C to +100°C

operating medium: mineral oil, other media on request

max. operating pressure (pressure vessel):

test pressure acc. to ASME VIII Div. 1:

test pressure acc. to API 614, Chapter 1:

40 bar

1,3 x operating pressure = 52 bar

1,5 x operating pressure = 60 bar

process connection system: SAE-flange 3000 PSI or

ANSI-flange B16.5 CLASS 150/300 PSI housing material: carbon steel (ASTM), see sheet-no. 69578

sealing material: Nitrile (NBR) or Viton (FPM), other materials on request

installation position: vertical

bleeder connection: NPT $\frac{1}{2}$ " or ANSI $\frac{3}{4}$ " CLASS 150/300 PSI drain connection dirt side: NPT $\frac{1}{2}$ " or ANSI $\frac{3}{4}$ " CLASS 150/300 PSI

drain connection clean side: NPT ½" volume tank: 2x 3,0 l

operating pressure adapter flanges: according to B16.5 CLASS 150 PSI (FA11/FA12 max. 16 bar) according to B16.5 CLASS 300 PSI (FA1/FA2 max. 40 bar)

Classified under the Pressure Equipment Directive 2014/68/EU for mineral oil (fluid group 2), Article 4, Para. 3. Classified under ATEX Directive 2014/34/EU according to specific application (see questionnaire sheet-no. 34279-4).

Pressure drop flow curves:

Filter calculation/sizing

The pressure drop of the assembly at a given flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

 Δp assembly = Δp housing + Δp element

 $\Delta p_{housing} = (\text{see } \Delta p = f(Q) - \text{characteristics})$

$$\Delta p_{Element} \left(mbar \right) = Q \left(\frac{l}{min} \right) x \; \frac{MSK}{10} \left(\frac{mbar}{l/min} \right) \; x \; v \left(\frac{mm^2}{s} \right) \; x \; \frac{\rho}{0.876} \left(\frac{kg}{dm^3} \right)$$

For ease of calculation our Filter Selection tool is available online at www.eaton.com/hydraulic-filter-evaluation

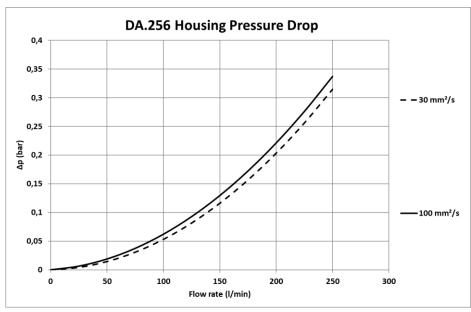

Material gradient coefficients (MSK) for filter elements

The material gradient coefficients in mbar/(l/min) apply to mineral oil (HLP) with a density of 0,876 kg/dm³ and a kinematic viscosity of 30 mm²/s (139 SUS). The pressure drop changes proportionally to the change in kinematic viscosity and density.

1	DA	VG				G				API		
		3VG	6VG	10VG	16VG	25VG	10G	25G	40G	80G	10 API	25 API
2	256	0,931	0,646	0,414	0,360	0,246	0,0374	0,0277	0,0258	0,0177	0,212	0,097

∆p=f(Q) - characteristic according ISO 3968

The pressure drop characteristics apply to mineral oil (HLP) with a density of 0,876 kg/dm³. The pressure drop changes proportionally to the density.

Test methods: Filter elements are tested according to the following ISO standards:

ISO 2941 Verification of collapse/burst resistance
 ISO 2942 Verification of fabrication integrity
 ISO 2943 Verification of material compatibility with fluids
 ISO 3723 Method for end load test
 ISO 3724 Verification of flow fatigue characteristics
 ISO 3968 Evaluation of pressure drop versus flow characteristics
 ISO 16889 Multi-pass method for evaluating filtration performance
