Series MDV 40-63 DN15-20 PN200

∏ Tank

1) Connection for the potential equalization, only for application in the explosive area.

type	MDV 40	MDV 63	
connection	G ½	G ¾	
Α	211	271	
В	110	170	
С	30	36,5	
weight	2,7 kg	3,2 kg	
volume tank	0,25 l	0,35 l	

Connection assignments as shown in the table are standard according to DIN 24 550 T1.

Are the connection assignments against DIN 24 550 T1, see item 9 of the type code.

Dimensions: mm

Pressure Filter Series MDV 40-63 DN15-20 PN200

Description:

The pressure filters of the series MDV 40-63 are suitable for a working pressure up to 200 bar and equipped with elements according to DIN 24 550 T3. The pressure peaks are absorbed by a sufficient margin of safety. The MDV-filter is in-line mounted.

The filter element consists of star-shaped, pleated filter material, which is supported on the inside by a perforated core tube and is bonded to the end caps with a high-quality adhesive. The flow direction is from outside to inside. Filter elements are available down to $5~\mu m_{(c)}$. Finer filtration is available upon request.

For cleaning the stainless steel mesh element (see special leaflets 21070-4 and 39448-4) or changing the filter element, remove the filter bowl and take out the element. The mesh elements are not guaranteed to maintain 100% performance after cleaning.

Eaton filter elements are known for high intrinsic stability and an excellent filtration capability, a high dirt-retaining capacity and a long service life.

Eaton filter can be used for petroleum-based fluids, HW emulsions, water glycols, most synthetic fluids and lubrication fluids. Consult factory for specific fluid applications.

Eaton filter elements are available up to a pressure resistance of Δp 160 bar and a rupture strength of Δp 250 bar.

The differential pressure-valve opens independently of the operating pressure at a chosen differential pressurevalve between IN and OUT and leaves an unfiltered partial-flow flowing from "IN" to the tank.

Type index:

Complete filter: (ordering example)

MDV. 40. 10VG. HR. E. P. -. G. 3. -. D2. AE
1 2 3 4 5 6 7 8 9 10 11 12

1 series:

MDV = Medium pressure filter with differential pressure-valve

2 **nominal size:** 40, 63

3 filter-material:

80G, 40G, 25G stainless steel wire mesh 25VG, 16VG, 10VG, 6VG, 3VG microglass

4 filter element collapse rating:

 $30 = \Delta p \, 30 \, bar$

HR = Δp 160 bar (rupture strength Δp 250 bar)

5 filter element design:

E = single-end open

6 sealing material:

P = Nitrile (NBR) V = Viton (FPM)

7 filter element specification:

= standard VA = stainless steel

8 process connection:

G = thread according to ISO 228

9 process connection size:

 $3 = G \frac{1}{2}$ $4 = G \frac{3}{4}$

10 | filter housing specification:

= standard

11 internal valve:

D1 = differential pressure-valve Δp 3,5 bar D2 = differential pressure-valve Δp 7,0 bar

12 clogging indicator or clogging sensor:

= without

AOR = visual, see sheet-no. 1606 AOC = visual, see sheet-no. 1606 AE = visual-electric, see sheet-no. 1615

VS5 = electronic, see sheet-no. 1619

To add an indicator/sensor to your filter, use the corresponding indicator data sheet to find the indicator details and add them to the filter assembly model code.

Filter element: (ordering example)

01NL. 40. 10VG. HR. E. P. -1 | 2 | 3 | 4 | 5 | 6 | 7 |

1 series:

01NL. = standard filter element according to DIN 24550, T3

2 | nominal size: 40, 63

3 - 7 see type index-complete filter

.

Technical data:

operating temperature: -10°C to +100°C

operating medium mineral oil, other media on request

max. operating pressure: 200 bar test pressure: 286 bar

process connection: thread according to ISO 228

housing material: aluminium forging alloy; C-steel (filter bowl)

sealing material: Nitrile (NBR) or Viton (FPM), other materials on request

installation position: vertica

Classified under the Pressure Equipment Directive 2014/68/EU for mineral oil (fluid group 2), Article 4, Para. 3. Classified under ATEX Directive 2014/34/EU according to specific application (see questionnaire sheet-no. 34279-4).

Pressure drop flow curves:

Filter calculation/sizing

The pressure drop of the assembly at a given flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

 Δp assembly = Δp housing + Δp element

 Δp housing = (see $\Delta p = f(Q)$ - characteristics)

$$\Delta p_{\, \text{element} \, (mbar)} = \, \, Q \, \, \left(\frac{l}{min} \right) \, \, x \, \, \frac{MSK}{10} \left(\frac{mbar}{l/min} \right) \, \, x \, \, \nu \, \left(\frac{mm^2}{s} \right) \, \, x \, \, \frac{p}{0,876} \, \left(\frac{kg}{dm^3} \right)$$

For ease of calculation our Filter Selection tool is available online at www.eaton.com/hydraulic-filter-evaluation

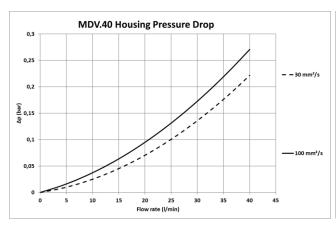

Material gradient coefficients (MSK) for filter elements

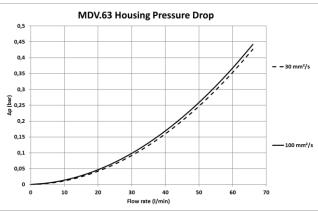

The material gradient coefficients in mbar/(l/min) apply to mineral oil (HLP) with a density of 0,876 kg/dm³ and a kinematic viscosity of 30 mm²/s (139 SUS). The pressure drop changes proportionally to the change in kinematic viscosity and density.

MDV	VG				G			
	3VG	6VG	10VG	16VG	25VG	25G	40G	80G
40	5,709	3,963	2,537	2,209	1,509	0,1545	0,1442	0,0988
63	3,441	2,389	1,530	1,332	0,910	0,0924	0,0862	0,0591

$\Delta p = f(Q) - characteristics according to ISO 3968$

The pressure drop characteristics apply to mineral oil (HLP) with a density of 0,876 kg/dm³. The pressure drop changes proportionally to the density.

Symbols:

filter with

differential pressure valve

without indicator

with electric indicator AE30 / AE40

with visual-electric indicator AE50 / AE62

with visual-electric indicator AE70 / AE80 / AE90

with visual indicator AOR/AOC

with electronic clogging sensor VS5

Spare parts:

item	qty.	designation	dimension		article-no.		
			MDV 40	MDV 63			
1	1	filter element	01NL.40	01NL.63			
3	1	O-ring	54 x 3		304657 (NBR)	304720 (FPM)	
4	1	support ring	60 x 2,6 x 1		311779		

Test methods: Filter elements are tested according to the following ISO standards:

ISO 2941 Verification of collapse/burst resistance ISO 2942 Verification of fabrication integrity

ISO 2943 Verification of material compatibility with fluids

ISO 3723 Method for end load test

ISO 3724 Verification of flow fatigue characteristics

ISO 3968 Evaluation of pressure drop versus flow characteristics ISO 16889 Multi-pass method for evaluating filtration performance
