

C22 pilot devices offer clean installation, compact design and a complete

## EAT•N

Powering Business Worldwide
selection of operators for virtually any industrial application.

## Clean Installation.

Reduce installation time with C22's simple, central nut application. Contacts are built into the barrel eliminating separate contact blocks and lamp elements.

## Compact Design.

The line features a 22 mm monoblock design with an "all in one" housing that includes contacts and lamp elements.

## Complete Offering.

C22 monoblock pilot devices offer a broad selection of operators, functionality and features, exceeding what is typical for this class of device.

The C22 line features monoblock construction with built-in contacts for a clean, simple installation. The 22 mm design is compact, yet offers the same pressable area as 30 mm buttons. Choose from a broad selection of standard operators, including keyed switches and two sizes of emergency stops, both keyed and non-keyed. Laser etching of button plates is also available for custom applications.

## Innovative design

C22 pilot devices are modeled after our modern M22 line. Graceful curves, clean lines and two styles of colored bezels, titanium and black, provide a distinguished look to make your panel stand out. In addition, the two lines share many common parts and accessories that make the C22 even more flexible and complete.

## Rugged

C22 standard buttons have a mechanical lifespan up to five million operations. That's equivalent to performing one ON/OFF cycle every minute for over 9.5 years. They can also operate in ambient temperatures between $-25^{\circ} \mathrm{C}$ and $+70^{\circ} \mathrm{C}\left(-13^{\circ} \mathrm{F}\right.$ to $\left.158^{\circ} \mathrm{F}\right)$ for use in the harshest environments. Illuminated operators are all equipped with LED bulbs with life spans up to 100,000 hours.

## High environmental ratings

Most front elements have a minimum IP67 (NEMA 4X, 13) environmental rating, protecting them against water immersion to one meter. Many standard operators also have the more stringent IP69K ratings, protecting them from submersion and high pressure/ temperature wash down environments.

## Broad selection

The new C22 line includes a broad selection, exceeding what is typical for this class of device:

## 1. Flush, non-illuminated

 pushbutton - momentary and maintained. Maintained are field convertible to momentary.2. Extended, non-illuminated pushbutton - momentary and maintained. Maintained are field convertible to momentary.

## 3. Flush and extended

 illuminated pushbutton momentary and maintained. Maintained are field convertible to momentary.4. Pilot lights - with LED illumination.

## 5. Keyed two and three

 position selector switches momentary and maintained; Momentary are field convertible to maintained; 40 and 60 degree return; Eleven different keys available.6. Twist-and-Release Emergency Stops - 45 and 60 mm ; keyed and nonkeyed; Eleven different keys available. LED light ring available for high visibility in mission critical applications.

## Available contact block configurations

Standard and extended pushbuttons; two position selector switches

## Reduce inventories

Unique to Eaton's 22 mm pilot devices is the ability to convert a button's functionality in the field. Maintained pushbuttons can be converted to momentary with the flick of a switch, while momentary selector switches can be converted to maintained. This flexibility adds tremendous advantage over dedicatedfunction devices currently on the market. Inventories are reduced and functionality is increased.
