

Installation Instructions for PSG120F24RM POWER SUPPLY

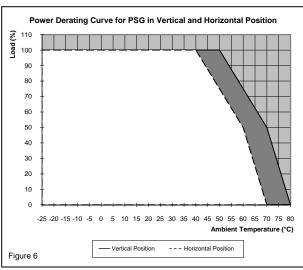

# READ INSTRUCTIONS BEFORE INSTALLING OR OPERATING THIS DEVICE. KEEP FOR FUTURE REFERENCE.

# 1. Safety instructions

- Switch main power off before connecting or disconnecting the device. Risk of explosion! To guarantee sufficient convection cooling, please keep a distance of 50 mm above and below the device as well as a lateral distance of 5 mm to other units
- Note that the enclosure of the device can become very hot depending on the ambient temperature and load of the power supply. Risk of burns!
- The main power must be turned off before connecting or disconnecting wires to the terminals!
- Do not introduce any objects into the unit!
- Dangerous voltage present for at least 5 minutes after disconnecting all sources of power.

  The power supplies are built-in units and must be installed in a cabinet or room (condensation free environment and indoor location) that is relatively free of conductive contaminants. The unit must be installed in an IP54 enclosure or cabinet in the final installation.

- Warning: Explosion Hazard Substitution of components may impair suitability for Class I, Division 2. Warning: Explosion Hazard Do not disconnect equipment or adjust potentiometer unless the power has been switched off or the area is known to be non-hazardous

# CAUTION: "FOR USE IN A CONTROLLED ENVIRONMENT".

- Device description (Fig. 1)
   (1) Input terminal block connector

  - (2) Output terminal block connector
    (3) DC voltage adjustment potentiometer
    (4) DC OK control LED (green)

  - (5) Universal mounting rail system

The power supply unit can be mounting on 35 mm DIN rails in accordance with EN 60715. In Vertical Position, the device should be installed with input terminal block on the bottom. In Horizontal Position, the device should be installed with input terminal block on the left side.

Each device is delivered ready to install

- Snap on the DIN rail as shown in Fig. 2:

  1. Tilt the unit slightly upwards and put it onto the DIN rail.

  - Push downwards until stopped.
     Press against the bottom front side for locking.
  - 4. Shake the unit slightly to ensure that it is secured.

## 4. Dismounting (Fig. 3)

To uninstall, pull or slide down the latch as shown in Fig. 3. Then, slide the PSU in the opposite direction, release the latch and pull out the PSU from the rail.

## Connection

The terminal block connectors allow easy and fast wiring.

You can use flexible (stranded wire) or solid cables with cross sections:

Table	Stranded / Solid		Torque	
rabie	(mm²)	(AWG)	(Kgf-cm)	(lb in)
(1)	0.82-3.3	18-12	9.3	8.1
(2)	0.82-3.3	18-12	6.2	5.4

To secure reliable and shock proof connections, the stripping length should be 7 mm (see Fig. 4 (1)). Please ensure that wires are fully inserted into the connecting terminals as shown in Fig. 4 (2). In accordance to EN 60950 / UL 60950, flexible cables require ferrules.

Use appropriate copper cables that are designed to sustain operating temperature of 1. 60°C, 60°C / 75°C for USA

- 2. At least 75°C for ambient not exceeding 50°C, and 90°C for ambient exceeding 50°C for Canada.

5.1. Input connection (Fig. 1, Fig. 5) Use L1, L2, L3 and PE connections of input terminal connector to establish the 3  $\times$  400-500 VAC connection. Fig. 5 shows the connection to the various network types. In the event of a phase failure, unrestricted operation is possible with nominal capacity. The device has an

internal fuse, 3 x power circuit-breakers 6 A, 10 A or 16 A power circuit breakers are recommended as backup fuses. The unit shall be installed with branch circuit protective device 20 A (UL 489 Listed).

The internal fuse must not be replaced by the user In case of internal defect, please call 1 - 877 - ETN - CARE

5.2. Output connection (Fig. 1 (2))
Use the "+" and "-" screw connections to establish the 24Vdc connection. The output provides 24 VDC. The output voltage can be adjusted from 24 to 28 VDC on the potentiometer. The green LED DC OK displays correct function of the output (Fig. 1 (4)). The device has a short circuit and overload protection and an overvoltage protection limited to 35 VDC.

## 5.3. Output characteristic curve

The device functions normal under operating line and load conditions. In the event of a short circuit or overload the output voltage and current collapses ( $I_{OL}$  or  $I_{SC}$  is  $>I_{surge}$  (150%)). The secondary voltage is reduced and bounces until short circuit or overload on the secondary side has been removed.

# 5.4. Thermal behavior (Fig. 6).

In the case of ambient temperatures above +50°C (Vertical) or +40°C (Horizontal), the output capacity has to be reduced by 2.5% per degree Celsius increase in temperature, and at +70°C (to +80°C (Vertical) or +60°C to +70°C (Horizontal), the output capacity has to be reduced by 5% per degree Celsius increase in temperature. If the output capacity is not reduced when T<sub>Amb</sub> > 50°C (Vertical) or > 40°C (Horizontal), the device will run into thermal protection by switching off i.e. device will go in bouncing mode and will recover when ambient temperature is lowered or load is reduced as far as necessary to keep device in working

FOR TECHNICAL ASSISTANCE CALL 1 - 877 - ETN - CARE

TECHNICAL DATA FOR PSG120F24RM	
Input (AC)	
Input (AC)	2 11 400 500 \\AC \/ 50 CO \ -
Nominal input voltage / frequency	3 x 400-500 VAC / 50-60 Hz
Voltage range	320-600 VAC
Frequency Nominal current	47-63 Hz < 0.50 A @ 3 x 400 VAC
Inrush current limitation. I <sup>2</sup> t (+25°C) typ.	< 0.50 A @ 3 x 400 VAC < 30 A @ 3 x 400 VAC & 3 x 500 VAC, AC Source capability up to 3 kVA
inrush current limitation. 14 (+25°C) typ.	< 60 A @ 3 x 400 VAC & 3 x 500 VAC, AC Source capability up to 3 kVA
Mains buffering at nominal load (typ.)	> 20 ms @ 3 x 400 VAC, > 40 ms @ 3 x 500 VAC
Turn-on time	<1 sec.
Internal fuse	T 3.15 AH / 500 V. 600 V
internariuse	- LITTELFUSE: Type 477 Rated 3.15 A / 600 VAC for UL E10480 and
	3.15 A / 500 VAC for Europe
	- CONQUER: Type UDE/UDE-A Rated 3.15 A / 500 VAC for both UL E82636 and
	Europe
Recommended backup fuse	3 x circuit breakers 6 A, 10 A or 16 A
Power circuit-breaker characteristic	B
Leakage current	< 3.5 mA
Output (DC)	
Nominal output voltage U <sub>N</sub> / tolerance	24 VDC ± 2 %
Adjustment range of the voltage	24-28 VDC (maximum power ≤ 120 W)
Nominal current	5 A
Derating	> 50°C (2.5 % / °C), > 70°C (5% / °C) in Vertical
Dordung	> 40°C (2.5 % / °C), > 60°C (5% / °C) in Horizontal
Startup with capacitive loads	Max. 10,000 µF
Max. power dissipation idling / nominal load approx.	16.5 W
Efficiency (at 400 VAC & 500 VAC and nominal values)	> 87.0% @ 3 x 400 VAC, > 86.0% @ 3 x 500 VAC
Residual ripple / peak switching (20 MHz) (at nominal values)	< 50 mVpp / < 150 mVpp
Parallel operation	PSG480R24RM / PSG960R24RM / With ORing Diode
General Data	Too look a many too ook a many man orang blood
Type of housing	Aluminum
Signals	Green LED DC OK
MTBF	> 500,000 hrs.
Dimensions (L x W x H)	121 mm x 50 mm x 117.3 mm
Weight	0.66 kg
Connection method	Screw connection
Stripping length	7 mm
Operating temperature (surrounding air temperature)	-25°C to +80°C (Refer to Fig. 6)
Storage temperature	-25°C to +85°C
Humidity at +25°C, no condensation	< 95% RH
Vibration (non-operating)	10 to 500 Hz @ 30 m/s² (3 G peak); displacement of 0.35 mm; 60 min. per axis for
vibration (non operating)	all X, Y, Z directions in acc. with IEC 60068-2-6
Shock (in all directions)	30 G (300 m/s²) in all directions according to IEC 60068-2-27
Altitude (operating)	2.000 Meters for industrial application
7 militudo (oporaling)	2,500 Meters for ITE application
Pollution degree	2
Climatic class	3K3 according to EN 60721
Certification and Standards	one according to any cora.
