

Mining-rated vacuum contactor and starter service and exchange program

Eaton's Breaker Service Centers located in Beckley, WV and Evansville, IN announce a new offering—service on mining-rated vacuum contactors and starters.

For years, the mining industry has depended on the experience and reputation of the Service Centers to provide quality and timely service of mining-duty molded case circuit breakers.

In response to increasing demand resulting from the Mine Safety and Health Administration's recently published PIB 06-02 concerning the potential safety issues of using third parties for service of molded case circuit breakers, the Service Centers are expanding their industry capabilities to include the service exchange of mining-duty vacuum contactors and starters.

These Service Centers remain the ONLY facilities authorized by Eaton to provide service solutions for Cutler-Hammer® and classic Westinghouse® molded case circuit breakers and vacuum contactors and starters.
