

Eaton Drives Flex Center's Specifiable Feature

Clear Keypad Cover

Many modern variable frequency drive (VFD) assemblies use an externally mounted keypad for manual control. In addition to controlling the VFD, the keypad can also display many important parameters. Depending on the location of the assembly, preventing unauthorized access to the keypad is a desirable security measure.

Prevent unauthorized access to the keypad and retain the ability to view the important parameters displayed on the keypad with the **Padlockable Clear Keypad Cover** option for EGS, EGF, SVX, and CFX enclosed variable frequency drives. The padlockable clear keypad cover option provides a NEMA 4X rated transparent keypad cover with a stainless steel snap latch that can be secured with a lock.

Benefits

- Provides secure and authorized access to the keypad
- Increases security measures for systems with VFD assemblies
- Retain ability to view important parameters displayed on the keypad
- Rated for indoor and outdoor applications
