

The XC300 modular PLC: Powerful communication

The powerful XC300 PLC for modular automation systems is available in three different versions featuring up to three Ethernet interfaces on board.

The XC300 modular PLC range from Eaton's XControl™ portfolio enables machine builders and system integrators to bring streamlined, modern automation concepts to life. The controller features different interfaces (Ethernet, CAN) as well as integrated I/Os. In conjunction with the XN300 I/O system, which can be both local or remote, this supports the creation of compact systems. The innovative XV300 touch panel completes the system offering enabling modern, networked automation solution.

A universal and flexible data transfer system

Thanks to its various interfaces, the controller is ideal for use as a universal and flexible data node in a wide range of applications. The integrated OPC server for standardized data transmission in machine-to-machine communication enables seamless integration into the automation architecture and creates an easy path towards Industry 4.0. And the integrated HTML5 web server offers remote visualization on mobile devices such as PCs, tablets and smartphones.
