

Superior Solutions

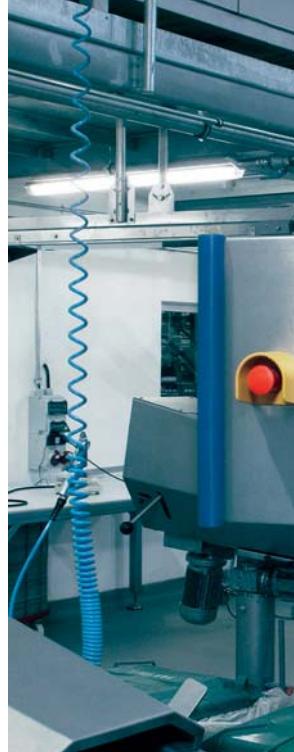

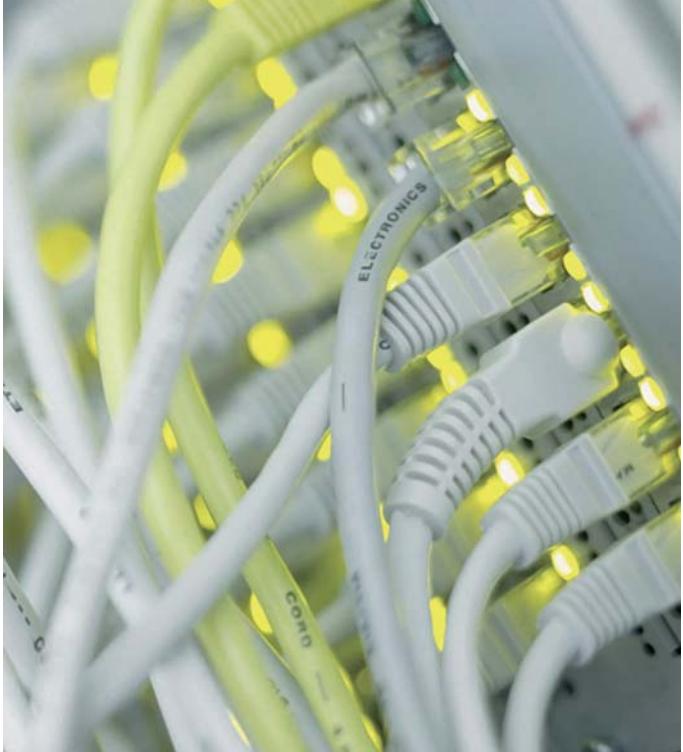

To Meet and Exceed The Unique and
Wide-ranging Requirements

Powering Business Worldwide

An Eaton Brand

Powering electrical systems worldwide

Buildings

- Residential
 - Healthcare
 - Education
 - Commercial offices
 - Retail
 - Public sector
 - Airports
-
- Electrical distribution solutions for safe and efficient power delivery
 - Power quality systems for uptime and reliability
 - Power metering and monitoring to add intelligence and save costs
 - Industrial control products for HVAC applications

Information Technology

- Data centers
 - Telecommunication
 - Networks
 - Computer rooms
-
- World's most efficient line of UPSs to reduce footprint and save energy
 - Reliable power systems with inherent redundancy to improve availability
 - Power metering and monitoring to diagnose problems and lower costs
 - Local service and support for quick response

Public and private sectors

Buildings, Information Technology, Industrial & Machinery, Energy & Utilities
We provide reliable, efficient and safe power management.

Industrial & Machinery

- Machine building:
 - Food and packaging machines
 - Woodworking and processing machines
 - Agriculture
 - Construction
 - Mining and metals
 - Paper industry
 - Chemical and pharmaceutical industry
 - Automotive industry
 - Logistics centers
-
- Electrical distribution equipment to deliver power throughout the enterprise
 - Control & automation and power quality equipment for process control
 - Power metering and monitoring to manage energy costs and uptime
 - Power and motion control products to optimize productivity, reliability, safety and operator comfort

Energy & Utilities

- Renewable energy:
 - Solar
 - Wind
 - Hydropower
 - Traditional energy:
 - Oil
 - Gas
 - Smart grid
 - Water and waste water
-
- Electrical balance of system and turnkey services for residential, utility and commercial solar installations
 - Power distribution equipment, control components and system installations services
 - Network power grid technology for intelligent data, lower costs and crew / public safety

Energizing a world that demands more.

We deliver:

- **Electrical solutions** that use less energy, improve power reliability and make the places we live and work safer and more comfortable
- **Hydraulic and electrical solutions** that enable machines to deliver more productivity without wasting power
- **Aerospace solutions** that make aircraft lighter, safer and less costly to operate, and help airports operate more efficiently
- **Vehicle drivetrain and powertrain solutions** that deliver more power to cars, trucks and buses, while reducing fuel consumption and emissions

Ordering Description	52

IZM6 Series Air Circuit Breakers**Product description**

The IZM6 series circuit breakers are a new generation of high-performance air circuit breakers with sophisticated technology and comprehensive functions, offering safety and reliability.

The circuit breakers are suitable for use in electrical distribution networks with AC 50Hz/60Hz, rated operating voltage up to 690V, and rated operating current of 4000A and below, to provide functions such as measurement, diagnosis, analysis and communication, precise selective protection and power monitoring.

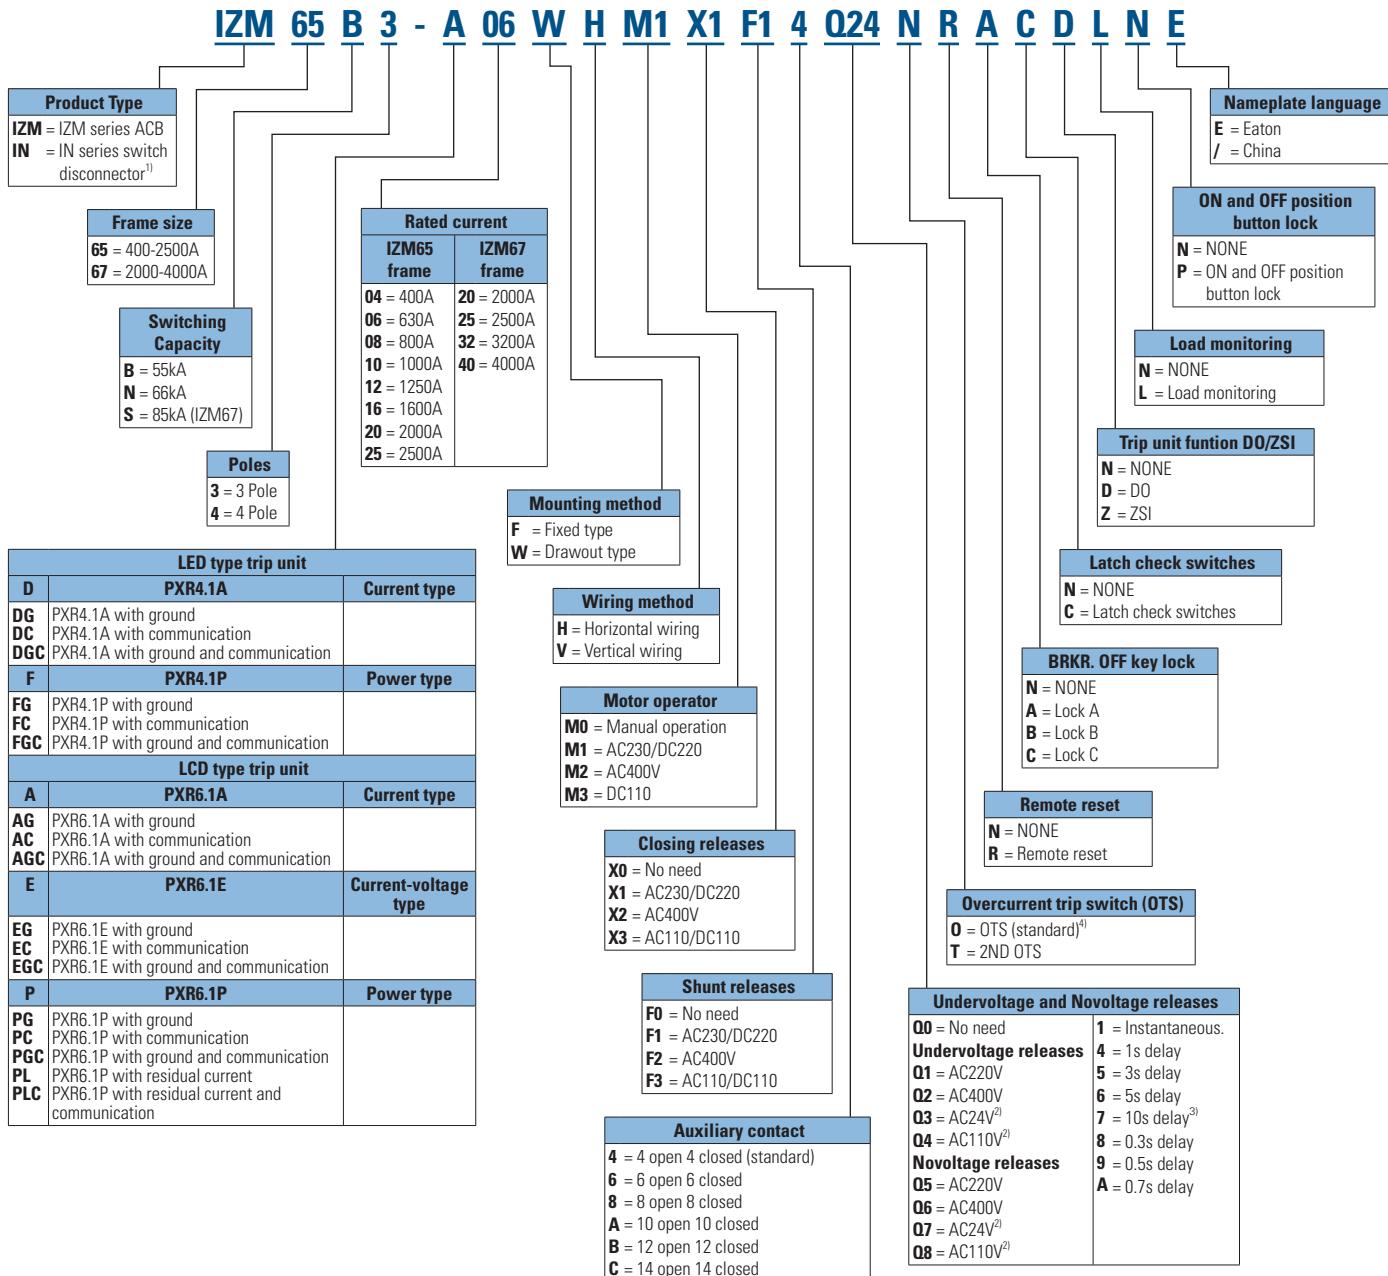

The circuit breaker complies with below standards:

IEC 60947-1 and GB14048.1	Low-voltage switchgear and control equipment: General
IEC 60947-2 and GB14048.2	Low-voltage switchgear and control equipment: Low voltage circuit breaker
IEC 60947-4-1 and GB14048.4	Low-voltage switchgear and control equipment: Contactor and motor starter
GB/T 14597	Climatic environmental conditions at different altitudes for electrical products
GB/T 2421.1	Environmental testing of electrical and electronic products: Overview and guidelines
GB/T 20626.1	Plateau electrical and electronic products for special environmental conditions Part 1: General technical requirements
GB/T 2423.1	Environmental testing of electrical and electronic products Part 2: Test method - Test A: Low temperature
GB/T 2423.2	Environmental testing of electrical and electronic products Part 2: Test method - Test B: High temperature
GB/T 2423.4	Environmental testing of electrical and electronic products Part 2: Test method - Test Db: Alternating damp heat test method
GB/T 2423.17	Environmental testing of electrical and electronic products Part 2: Test method - Test Ka: Salt mist
GB/T 2423.18-2000	Environmental testing of electrical and electronic products Part 2: Test method - Test Kb: Salt mist, alternating (sodium chloride solution)

IZM6 Series Air Circuit Breakers

Model Description

IZM6 Air Circuit Breakers Catalog Number (Full configuration)

Notes: ¹⁾ The IN65/67 is an isolated circuit breaker that removes the IZM65/67 circuit breaker from the PXR series of trip unit in accordance with the requirements of Annex L of GB/T14048.2-2020/IEC 60947-2, and the remaining configurations are consistent with the standard circuit breakers.

²⁾ Not launch.

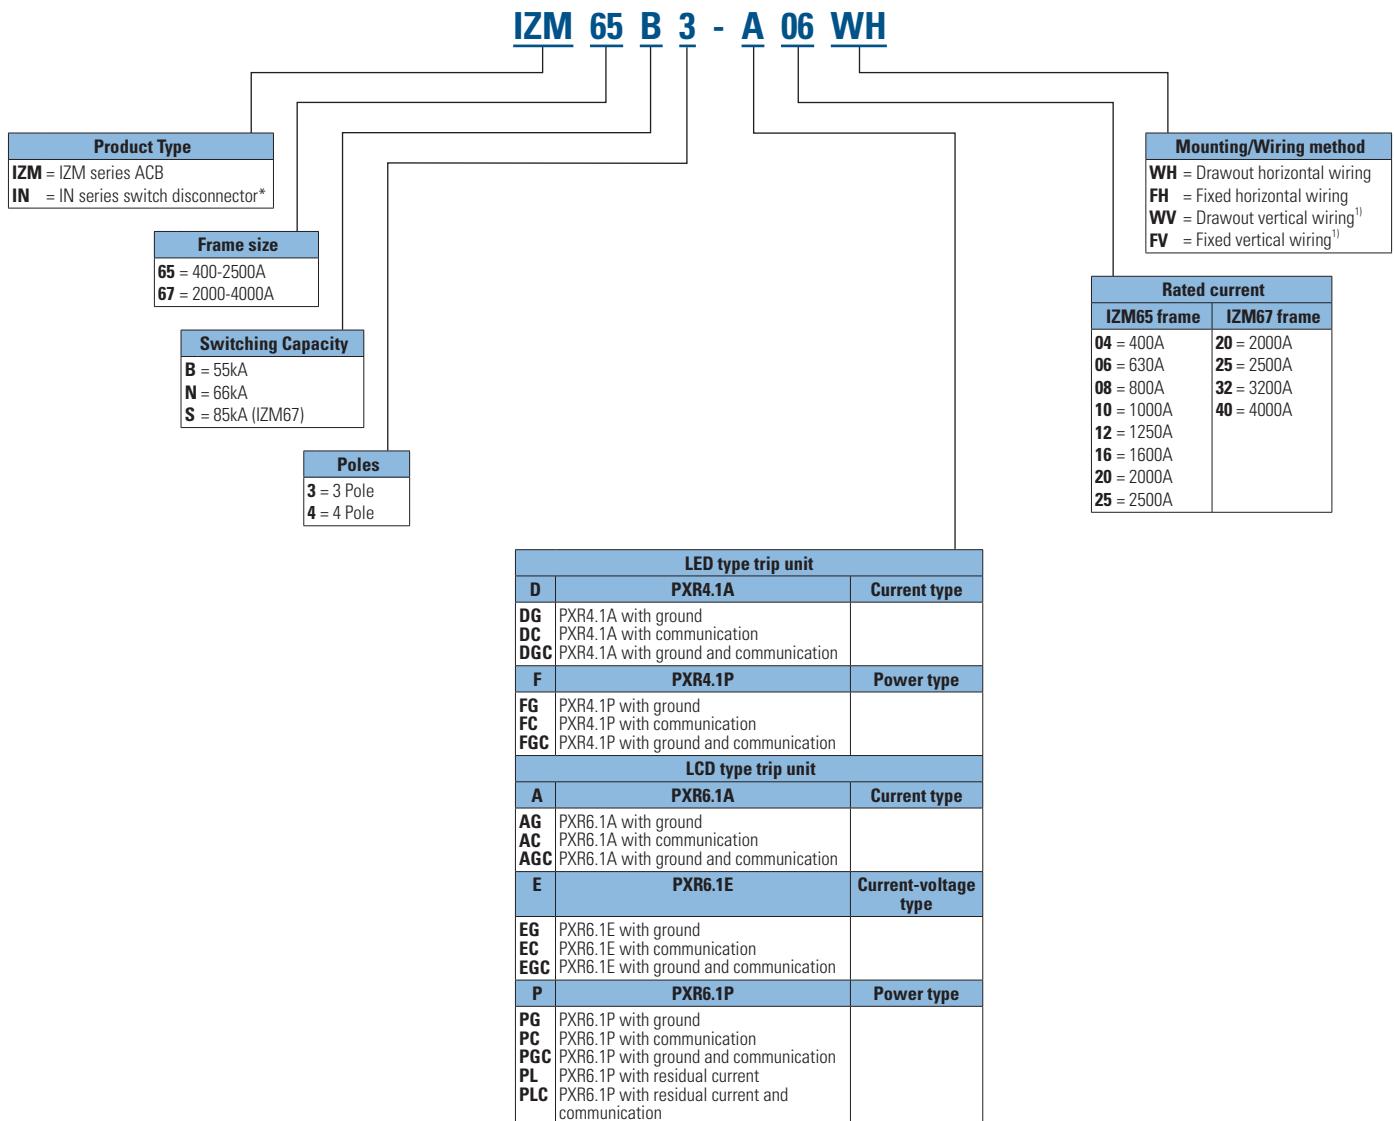

³⁾ Only undervoltage coils are supported.

⁴⁾ Default configuration.

The circuit breaker is equipped with a power supply module as standard.

Before purchasing the catalog number on this page, please contact EATON for the article number.

IZM6 Air Circuit Breakers Catalog Number (Standard configuration)

Drawout type

Devices are equipped as standard: Drawout circuit breaker's basic device, cassette, shunt coil (220V AC), closing coil (220V AC), motor operator (220V AC), auxiliary contact (4a4b), PXR series intelligent trip unit, Overcurrent trip switches OTS (1CO), door escutcheon, terminal block, 220VAC/DC to DC24V power supply module, safety shutter, arc extinguishing cover, and handle.

Fixed type

Devices are equipped as standard: Fixed circuit breaker's basic device, cassette, shunt coil (220V AC), closing coil (220V AC), motor operator (220V AC), auxiliary contact (4a4b), PXR series intelligent trip unit, Overcurrent trip switches OTS (1CO), door escutcheon, terminal block, 220VAC/DC to DC24V power supply module, arc extinguishing cover, and handle.

Notes: *The IN65/67 is an isolated circuit breaker that removes the IZM65/67 circuit breaker from the PXR series of trip unit in accordance with the requirements of Annex L of GB/T14048.2-2020/IEC 60947-2, and the remaining configurations are consistent with the standard circuit breakers.

¹⁾ Only IZM67 are supported.

For power supply input voltages, see IZM6 Operation Manual.

The circuit breaker is equipped with a power supply module as standard.

Weight (kg)	Fixed type, 3-pole / 4-pole	75Kg (3P) / 85Kg (4P)		85Kg (3P) / 95Kg (4P)	
	Drawout type, 3-pole / 4-pole	100Kg (3P) / 110Kg (4P)		126Kg (3P) / 136Kg (4P)	

Notes: The IN65/67 is an isolated circuit breaker that removes the IZM65/67 circuit breaker from the PXR series of trip unit in accordance with the requirements of Annex L of GB/T14048.2-2020/IEC 60947-2, and the remaining configurations are consistent with the standard circuit breakers. The IN65/67 is used in conjunction with an external protection relay (maximum delay of 400ms) to achieve a breaking capability (at U_e) to the I_{cw} (1 second).

Technical Features

Controller

The intelligent controller, a key element of the circuit breaker, offers basic protections such as overload, short circuit, and grounding. It can also protect against over voltage fault, under voltage fault, frequency fault, phase sequence fault, and current imbalance fault.

	PXR4.1A	PXR4.1P
Ordering code	D	F
Display type	LED	LED
Long delay protection (L)		
Long delay set point (Tolerance: 10%)	$I_r \times I_n$	0.4~1+OFF (Step is 1A or 2A)
Curve type		I^2t curve
Long delay time (Tolerance: 15%)	$t_r (6 \times I_r)$	0.5, 1, 1.9, 3.8, 7.5, 15, 22.5, 30, 37.5, 45, 52.5, 60
Long delay time (Tolerance: 15%)	$t_r (1.5 \times I_r)$	8, 15, 30, 60, 120, 240, 360, 480, 600, 720, 840, 960
Long delay time (Tolerance: 15%)	$t_r (7.2 \times I_r)$	0.35, 0.65, 1.3, 2.6, 5.21, 10.42, 15.63, 20.83, 26.04, 31.25, 36.46, 41.67
Short delay protection (S)		
Short delay set point (Tolerance: 10%)	$I_{sd} \times I_r$	1.5~15+OFF (Step is 1A or 2A)
Curve type		I^2t curve
Short delay time (t_{sd}) (Tolerance: 15%)	Fixed time	0.1, 0.2, 0.3, 0.4+OFF
Short delay time (t_{sd}) (Tolerance: 15%)	Inverse time $I^2t/10 (6 \times I_r)$	0.05, 0.1, 0.19, 0.38, 0.75, 1.5, 2.25, 3, 3.75, 4.5, 5.25, 6
Short delay time (t_{sd}) (Tolerance: 15%)	Inverse time $I^2t/10 (1.5 \times I_r)$	0.8, 1.5, 3, 6, 12, 21, 36, 48, 60, 72, 84, 96
Short delay time (t_{sd}) (Tolerance: 15%)	Inverse time $I^2t/10 (7.2 \times I_r)$	0.035, 0.065, 0.13, 0.26, 0.521, 1.042, 1.563, 2.083, 2.604, 3.125, 3.646, 4.167
Instantaneous protection (I)		
Instantaneous protection set point (Tolerance: 15%)	$I_i \times I_n$	$1I_n-15I_n+OFF$ (Step is 1A or 2A)
Ground fault protection (G)		
Ground fault protection set point (A) (Tolerance: 10%)	$\times I_n$	0.2~1+OFF (Step is 1A or 2A)
Ground fault protection set point (A) (Tolerance: 10%)	$I_g \times I_n$	0.2~1+OFF (Step is 1A or 2A)
Ground fault delay time (t_g) (Tolerance: 10%) (Inherent tolerance: 40ms)	I_{tg}	0.1~0.5s (Step is 0.1s)
Ground fault delay time (t_g) $t = I^2t@0.625 (t_g)$ (Tolerance: 10%)		0.1~0.5s (Step is 0.1s)
Under voltage protection ¹⁾		
Under voltage protection set point (Tolerance: 10%)		N/A $10U_n-70U_n+OFF$ (Step is 1V)
Under voltage protection delay time (Tolerance: 10%) (Inherent tolerance: 40ms)		N/A $0.2-60s$ (Step is 0.1s or 1s)
Over voltage protection ¹⁾		
Over voltage protection set point (Tolerance: 10%)		N/A $110\%U_n-130\%U_n+OFF$ (Step is 1V)
Over voltage protection delay time (Tolerance: 10%) (Inherent Tolerance: 40ms)		N/A $0.2-60s$ (Step is 0.1s or 1s)

¹⁾ Voltage protection of Phase A, B, C and N is connected to terminals with the maximum voltage of 400V. If above 400V, a voltage module is needed.

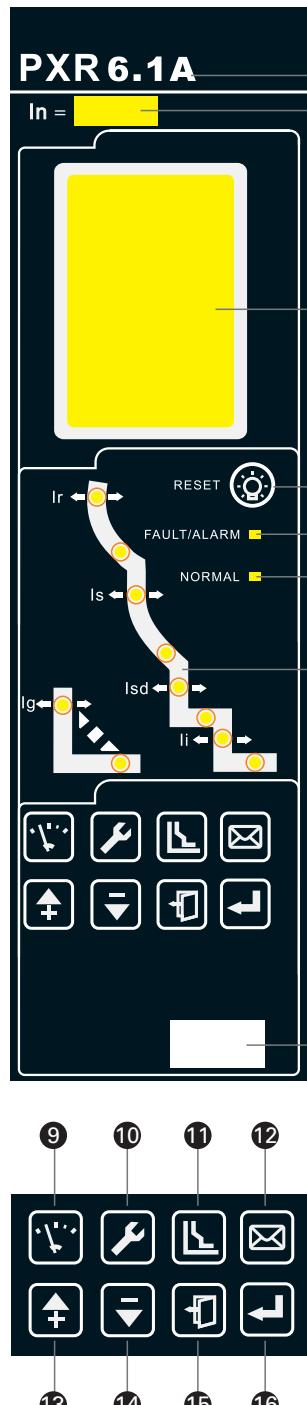

IZM6 Series Air Circuit Breakers

Intelligent Controller

PXR6.1A / PXR6.1E / PXR6.1P

6.1A Basic functions

- Overload long delay time, short circuit short delay time, short circuit instantaneous protection
- Ground protection (optional)
- Communication function (optional)
- Current measurement
- Functional test
- Fault memory
- Thermal memory
- Self-diagnosis
- Fault status indication and numerical display
- Signal contact output
- MCR
- Load monitoring (optional)
- Contact wear indication

- ① Controller model
- ② Rated current
- ③ LCD interface display
- ④ Fault and alarm reset button
- ⑤ Fault / alarm indicator
The LED light is not lit on during normal operation; the red LED light flashes quickly during a fault trip, and remains lit on in the event of an alarm
- ⑥ Normal status indicator
The green LED light keeps flashing when the controller is powered on and in normal operating status
- ⑦ Protection curve
There is a red LED indicator hidden in the curve. During a fault tripping, the corresponding LED light flashes to indicate the fault type; during protection parameter setting up, the LED light is always on to indicate the item being set
- ⑧ Test port
A 10-pin testing portal is available at the bottom of the front panel. A plug-in portable power source box or a detection unit can be inserted
- ⑨ Measurement: Function Key 1, to switch to default main menu under Measurement (which is, the Left key in the password input interface)
- ⑩ Set up: Function Key 2, to switch to the main menu of parameter setting up (which is, the Right key in the password input interface)
- ⑪ Protection: Function Key 3, to switch to the main menu of protection parameter setting up
- ⑫ Information: Function Key 4, to switch to the main menu of history record and maintenance
- ⑬ Up: Move up the menu content from the current level, or change the selected parameter up
- ⑭ Down: Move down the menu content from the current level, or change the selected parameter down
- ⑮ Exit: Exit to the previous-level menu from the current level, or cancel the selection of the current parameter
- ⑯ Select: Enter the next-level menu from the current level, or select the current parameter to save the modified value

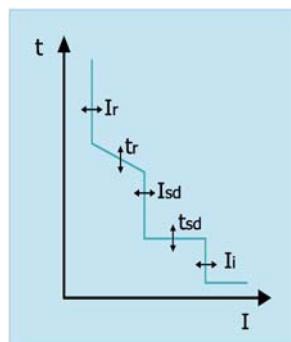

6.1E Add-on functions

- Voltage measurement
- Over-under voltage protection
- Over frequency protection
- Under frequency protection
- Phase sequence protection
- Voltage measurement
- Voltage imbalance measurement
- Frequency measurement
- Demand measurement (current)
- Phase sequence measurement

6.1P Add-on functions

- Reverse power measurement
- Power measurement
- Energy measurement
- Power factor measurement
- Demand measurement (power)

PXR6.1A / PXR6.1E / PXR6.1P

Overload long delay time

Acting current set point I_{set} , Current tolerance $\pm 10\%$ $(0.4 - 1.0) \times I_{\text{set}} + \text{OFF}$ (Step is 1A or 2A)

Notes: $N = I/I_{\text{set}}$ (I is the actual fault current, I_{set} is the overload current set value). The above set time value is the action delay time when $I = 1.5I_{\text{set}}$. As the current increases, the delay time will be shortened accordingly and can be calculated to the curve formula.

Thermal memory protection Instantaneous, 10m, 20m, 30m, 45m, 1h, 2h, 3h+OFF (can be eliminated upon power off)

Short circuit short delay time

Acting current set point I_{set} , Current tolerance $\pm 10\%$ $(1.5-15) \times I_{\text{set}} + \text{OFF}$ (Step is 1A or 2A)

Acting time t_{sd} Tolerance $\pm 15\%$	Fixed time delay set point 0.1~0.4s (Step is 0.1s)								
	Inverse time delay	The curve is the same as the overload long delay curve; the curve speed is 10 times faster than the overload long delay's (the time calculated to the overload delay curve formula divided by 10 is the short delay inverse delay time)							
Thermal memory protection	Subject to long delay settings								

Notes: When the inverse time and fixed time protection are both enabled, the inverse time current set point must be less than the fixed time current set point. Otherwise, the inverse time function will automatically fail, and the actual delay time is not less than the fixed time's set time.

Short circuit instantaneous

Acting current set point I_{set} , Current tolerance $\pm 10\%$ $(1-15) \times I_{\text{set}} + \text{OFF}$ (Min. 1I_{set})

Action characteristics	No action when $\leq 0.85I_{\text{set}}$	
	Action when $> 1.15I_{\text{set}}$	

Grounding protection

Acting current setting I_{set} , Current tolerance $\pm 10\%$ $(0.2-1.0) \times I_{\text{set}} + \text{OFF}$ (Min. 100A)

Action characteristics	No action when $< 0.8I_{\text{set}}$	
	Delay action when $\geq 1.0I_{\text{set}}$	
Action time t_{set} Tolerance $\pm 15\%$	Fixed time	0.1~0.5s+OFF (Step is 0.1)
	Inverse time (ON)	Fixed time when $I > 0.625I_{\text{set}}$ Inverse time when $I \leq 0.625I_{\text{set}}$
	Inverse time formula	$t = (0.625I_{\text{set}})^{pt}/I^2$ $t = \text{delay time}, T_{\text{set}} = \text{set delay time}, I_{\text{set}} = \text{rated current}$

Action mode: Trip + OFF

Ground alarm (ground alarm is independent from ground protection; both functions have their own independent parameter settings and can co-exist at the same time)

Alarm action setting Current $(0.2-1.0)I_{\text{set}}$ (Min. 100A)

Time 0.1~1s (Step is 0.1)

Alarm dismiss setting Current $(0.2-1.0)I_{\text{set}}$ (Min. 100A)

Time 0.1~1s (Step is 0.1)

Neutral-pole protection

Acting current setting I_{set} , Current tolerance $\pm 10\%$ $(0.5, 1.0, 1.6, 2.0) \times I_{\text{set}} + \text{OFF}$

Action time Same as the overload long delay time

Current imbalance protection

Protection setting 10%~60% (Step is 1%)

Delay time 0.2s~60s (Step is 0.1s)

Protection return setting 10%~start value (Step is 1%)

Delay time 10s~200s (Step is 1s)

Action characteristics or alarm characteristics No action when $\leq 0.9\delta$

Delay action or alarm when $> 1.1\delta$

Action mode: Trip + alarm + OFF

Load monitoring

Method 1 Setting current $I_{\text{cl1}}, I_{\text{cl2}}$ $(0.2-1) \times I_{\text{cl}} (\text{min. } 100\text{A}, \text{Step is } 1\text{A})$

Inverse delay time $t_{\text{cl1}}, t_{\text{cl2}}$ $(20\%-80\%) \times t_{\text{cl}}$

Method 2 Setting current I_{cl1} (unload value) $(0.2-1) \times I_{\text{cl}} (\text{min. } 100\text{A})$

Setting current I_{cl2} (return value) $0.2I_{\text{cl}} \sim I_{\text{cl}}$

Inverse delay time t_{cl1} $(20\%-80\%) \times t_{\text{cl}}$

Fixed delay time t_{cl2} 10s~600s

Voltage imbalance protection

Action threshold	2%~30% (step is 1%)	
Action delay time (s)	0.2~60 (step is 0.1)	
Return threshold	2%~ start value (step is 1%)	The set point is available only when the execution mode is set as "Alarm", and return value must be less than or equal to start value
Return delay time (s)	0.2~60 (step is 0.1)	
Action or alarm characteristics (Delay tolerance ± 10%)	Actual voltage imbalance/set point ≥ 1.1 Actual voltage imbalance/set point < 0.9	Fixed time action or alarm No action or alarm
Voltage imbalance alarm return characteristics (Delay tolerance ± 10%)	Actual voltage imbalance/set point ≤ 0.9 Actual voltage imbalance/set point > 1.1	Return No return
Alarm contact output	"Voltage imbalance alarm"	contact output can be added when the execution mode is set as Alarm

Under voltage protection ¹⁾

Action threshold (V)	100~return threshold (step is 1)	
Action delay time (s)	0.2~60 (step is 0.1)	
Return threshold (V)	Action threshold ~ 950 (step is 1)	The set point is available only when the execution mode is set as "Alarm", and return value must be less than or equal to start value
Action delay time (s)	0.2~60 (step is 0.1)	
Action or alarm characteristics (Delay tolerance ± 10%)	$U_{max}/$ action threshold < 0.9 $U_{max}/$ action threshold ≥ 1.1	Fixed time action or alarm No action or alarm
Under voltage alarm return characteristics (Delay tolerance ± 10%)	$U_{min}/$ action threshold > 1.1 $U_{min}/$ action threshold ≤ 0.9	Return No return
Alarm contact output	"Under voltage alarm"	contact output can be added when the execution mode is set as Alarm

Over voltage protection ¹⁾

Action threshold (V)	Return threshold ~ 950 (step is 1)	
Action delay time (s)	0.2~60 (step is 0.1)	
Return threshold (V)	220~action threshold (step is 1)	The set point is available only when the execution mode is set as "Alarm", and return value must be less than or equal to start value
Action delay time (s)	0.2~60 (step is 0.1)	
Action or alarm characteristics (Delay tolerance ± 10%)	$U_{min}/$ action threshold ≥ 1.1 $U_{min}/$ action threshold < 0.9	Fixed time action or alarm No action or alarm
Over voltage alarm return characteristics (Delay tolerance ± 10%)	$U_{max}/$ action threshold ≤ 0.9 $U_{max}/$ action threshold > 1.1	Return No return
Alarm contact output	"Over voltage alarm"	contact output can be added when the execution mode is set as Alarm

Demand protection

Action threshold (V)	$(0.2\sim1.0) \times I_n$ (step is 2)	
Action delay time (s)	15~1500 (step is 0.1)	
Return threshold (V)	$0.2I_n \sim$ start value (step is 2)	The set point is available only when the execution mode is set as "Alarm", and return value must be less than or equal to start value
Return delay time (s)	15~3000 (step is 1)	
Action or alarm characteristics (Delay tolerance ± 10%)	I/ set point ≥ 1.1 I/ set point < 0.9	Fixed time action or alarm No action or alarm
Demand current protection alarm return characteristics (Delay tolerance ± 10%)	I/ set point < 0.9 I/ set point > 1.1	Return No return
Alarm contact output	"Demand current protection alarm"	contact output can be added when the execution mode is set as Alarm

Phase sequence protection

Action phase sequence set range	△φ: A, B, C / △φ: A, C, B	
Alarm contact output	"Phase sequence fault alarm"	contact output can be added when the execution mode is set as Alarm
Protection execution mode	Alarm / Trip/ OFF	

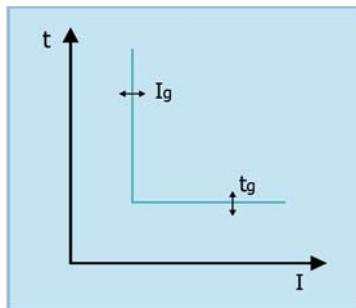

Frequency protection

Parameter setting range	Action threshold	Under frequency	45~ Return value (step is 0.1Hz)	
	Over frequency	Return value ~65 (step is 0.1Hz)		
Action delay time	0.2~5.0s (step is 0.1s)			
	Return threshold	Under frequency	Return value ~65Hz (step is 0.1Hz)	The set point is available only when the execution mode is set as "Alarm"
Over frequency				45Hz~ Return value (step is 0.1Hz)
Return delay time				0.2~36.0s (step is 0.1s)
Alarm contact output	"Under frequency alarm" and "Over frequency alarm" contact outputs can be added when the execution mode is set as Alarm			
Protection execution mode	Alarm / Trip/ OFF			

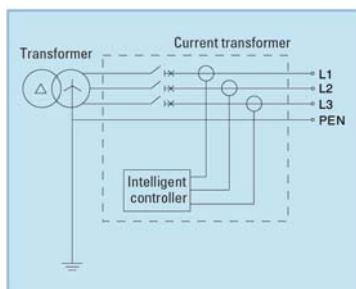

¹⁾ Voltage protection of Phase A, B, C and N is connected to terminals with the maximum voltage of 400V. When above 400V, a voltage module must be equipped.

Intelligent Controller's Protection Function Description

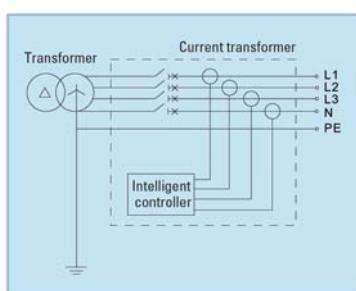

Ground fault protection characteristics

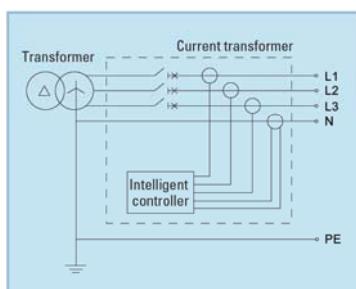

Method 1

Method 2

Method 3

Ground fault protection

- Ground fault fixed time or inverse time protection, with adjustable setting current I_g
- Adjustable delay time t_g
- Only alarm and no breaking after switched off (OFF)
- Ground fault protection method:
 - Method 1
 - Method 2
 - Method 3

Method 1: TN-C and TN-C-S power distribution systems use three-pole circuit breakers with no neutral current transformer.

- The ground fault protection signal takes the vector sum of the three phase currents
- The protection characteristics is fixed time or inverse time protection
- Only applicable when the three-phase imbalanced current and harmonic current flowing through the PEN neutral protection line are very small

Method 2: TN-S power distribution system uses a four-pole circuit breaker with an internal neutral current transformer.

- The ground fault protection signal takes the vector sum of the three phase currents and the N-phase current
- The protection characteristics is fixed or inverse time protection

Method 3: TN-S power distribution system uses a three-pole circuit breaker with an current sensor for neutral conductor.

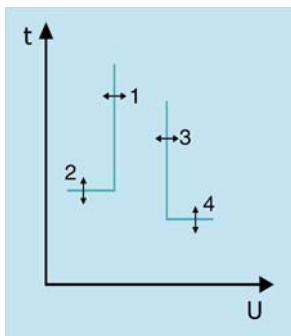

- The ground fault protection signal takes the vector sum of the three phase currents and the N-phase current
- The protection characteristics is fixed or inverse time protection

Notes: The length of the transformer conductor is not more than 2m

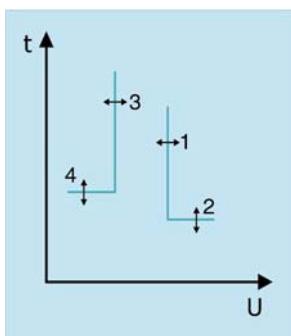

IZM6 Series Air Circuit Breakers

Intelligent Controller

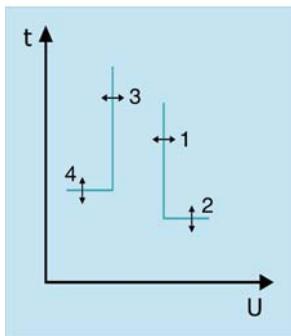

Under voltage protection acting principle

Over voltage protection acting principle

Voltage imbalance

Voltage protection

Under voltage protection

The intelligent controller measures the RMS value of the primary circuit voltage. When the three line voltages are all less than the set point, that is, when the maximum value of the three line voltages is less than the under voltage protection threshold, the undervoltage protection will act; when the minimum value of the three line voltages are greater than the return value, the alarm action will return.

Action characteristics:

- When the maximum voltage is less than the action threshold (1), the alarm or trip delay will be activated;
- At the end of the action delay time (2), an alarm or trip signal will be issued, and the under voltage fault protection will act;
- When the minimum voltage is greater than the return threshold (3), the return delay will be activated;
- At the end of the return delay time (4), the alarm will be removed and the under voltage fault protection will return.

Over voltage protection

The intelligent controller measures the RMS value of the primary circuit voltage. When the three line voltages are all greater than the set value, that is, when the minimum value of the three line voltages is greater than the over voltage protection threshold, the over voltage protection will act; when the three line voltages are less than the return value, the alarm action will return.

Action characteristics:

- When the minimum voltage is greater than the action threshold (1), the alarm or trip delay will be activated;
- At the end of the action delay time (2), an alarm or trip signal will be issued, and the over voltage fault protection will act;
- When the execution mode is set as alarm, after the alarm action, the return delay will be activated when the minimum voltage is less than the return threshold (3);
- At the end of the return delay time (4), the alarm will be removed and the over voltage fault protection will return.

Voltage imbalance protection

Voltage imbalance protection enables protective actions based on the imbalance value between the three line voltages. The intelligent controller measures the voltage imbalance. When the voltage imbalance is greater than the action threshold, the protection will act; when the voltage imbalance is less than the return threshold, the alarm action will return.

Action characteristics:

- When voltage imbalance is greater than the action threshold (1), an alarm or trip delay will be activated;
- At the end of the action delay time (2), an alarm or trip signal will be issued, and voltage imbalance fault protection will act;
- When the execution mode is set as alarm, after the alarm action, the return delay will be activated when the voltage imbalance is less than the return threshold (3);
- At the end of the return delay time (4), the alarm will be removed and the voltage imbalance fault protection will return.

The voltage imbalance is calculated as below:

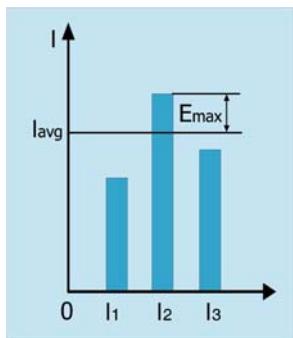

$$U_{unbal} = \frac{|E_{max}|}{U_{avg}} \times 100\%$$

$$U_{avg} = \frac{(U_{12} + U_{23} + U_{31})}{3}$$

E_{max} : The maximum difference between each phase voltage and average value.

U_{avg} : The average value of the RMS sum of the three-phase line voltages.

Current imbalance

Current imbalance protection

The current imbalance protection performs against open phase, phase loss and 3-phase current imbalance based on the imbalance between three phase currents:

The current imbalance is calculated as follows:

$$I_{\text{unbal}} = \frac{|E_{\text{max}}|}{I_{\text{avg}}} \times 100\%$$

$$I_{\text{avg}} = \frac{(I_{12} + I_{23} + I_{31})}{3}$$

E_{max} = The maximum difference between each phase current and I_{avg} .

I_{avg} = The average value of the three-phase current RMS

IZM6 Series Air Circuit Breakers

Intelligent Controller

Reverse power protection

It is used for generator protection. When the power is reversed, the generator may be damaged if it is running. If the power flows in a direction opposite to the set power's direction, and is greater than the action threshold set point, the circuit breaker will trip or send out an alarm signal after the action delay time (fixed time action). Then, if the reverse power in the circuit is less than the return threshold set point, the circuit breaker will remove the alarm signal after the return delay time (fixed time action). The reverse power protection function can be set to Enabled or Disabled. When enabled, it includes sending an alarm signal or tripping.

Current demand protection

It is mainly used for process controlling need. When the demand current of a certain phase is greater than the action threshold set point, the circuit breaker will trip or send out an alarm signal after the action delay time (fixed time action). Then, if the demand current of this phase is less than the return threshold set point, the circuit breaker will remove the alarm signal after the return delay time (fixed time action).

The current demand protection function can be set to Enabled or Disabled. When enabled, it includes sending an alarm signal or tripping.

Over frequency protection

It is used for generator protection. When the circuit frequency is greater than the action threshold set point, the circuit breaker will trip or send out an alarm signal after the action delay time (fixed time action). Then, if the circuit frequency is less than the return threshold set point, the circuit breaker will remove the alarm signal after the return delay time (fixed time action).

The over frequency protection function can be set to Enabled or Disabled. When enabled, it includes sending an alarm signal or tripping.

Under frequency protection

It is used for generator protection. When the circuit frequency is less than the action threshold set point, the circuit breaker will trip or send out an alarm signal after the action delay time (fixed time action). Then, if the circuit frequency is greater than the return threshold set point, the circuit breaker will remove the alarm signal after the return delay time (fixed time action).

The under frequency protection function can be set to Enabled or Disabled. When enabled, it includes sending an alarm signal or tripping.

Phase sequence protection

It is used in occasions where phase sequence is required. When it is detected that the phase sequence is the same as the action threshold, it will act instantaneously, and the circuit breaker will trip or send out an alarm signal. If one-phase or multi-phase voltage does not exist, this function will automatically exit.

The phase sequence protection function can be set to Enabled or Disabled. When enabled, it includes sending an alarm signal or tripping.

Contact wear indication

Current contact wear status can be displayed on the intelligent controller panel. The value displayed on the controller is 100% upon delivery from factory, indicating that the contact is not worn. When the value drops to 60%, an alarm signal will be issued to remind the user to take timely maintenance measures. After the contact is replaced, the initial wear value can be restored through setting up.

Self-diagnosis

The intelligent controller can diagnose its own faults, including ambient over temperature, E²PROM data error, A/D sampling error, and circuit breaker failure to act.

MCR

Making and breaking function (MCR): Switch off immediately due to short circuit fault during circuit breaker closing or controller initialization upon powering on.

Signal contact (DO) function (optional)

DO: Output function

The intelligent controller offers two to four sets of independent signal contact outputs.

Function setting	See DO Function Setting Table		
Execution mode	NO level	NC level	NO pulse
Pulse time	N/A		

Models to be purchased separately

DO function

Type	For use with	Part no. Article no.
4DO output	IZM6/67	IZM6-DO CAM-50047

Notes: Cannot be mounted separately and need to be purchased together with the basic device.

DO function setting table

General purpose	Alarm	Fault trip	Self-diagnosis alarm	Instantaneous fault
Ground / residual current fault	Overload pre-alarming	Overload fault	Short delay fault	Under voltage fault
Over voltage fault	Ground alarm	Current imbalance fault	Neutral line fault	Demand fault
Reverse power fault	Voltage imbalance fault	Under frequency fault	Over frequency fault	Phase sequence fault
MCR fault	Short circuit interlocking	Closing	Opening	Demand out of limit
Phase A demand fault	Phase B demand fault	Phase C demand fault	Neutral-phase demand fault	

Notes: General purpose means that this input/output is not used in the controller itself and can be operated by the host computer in the Communication group.

Zone selective interlocking

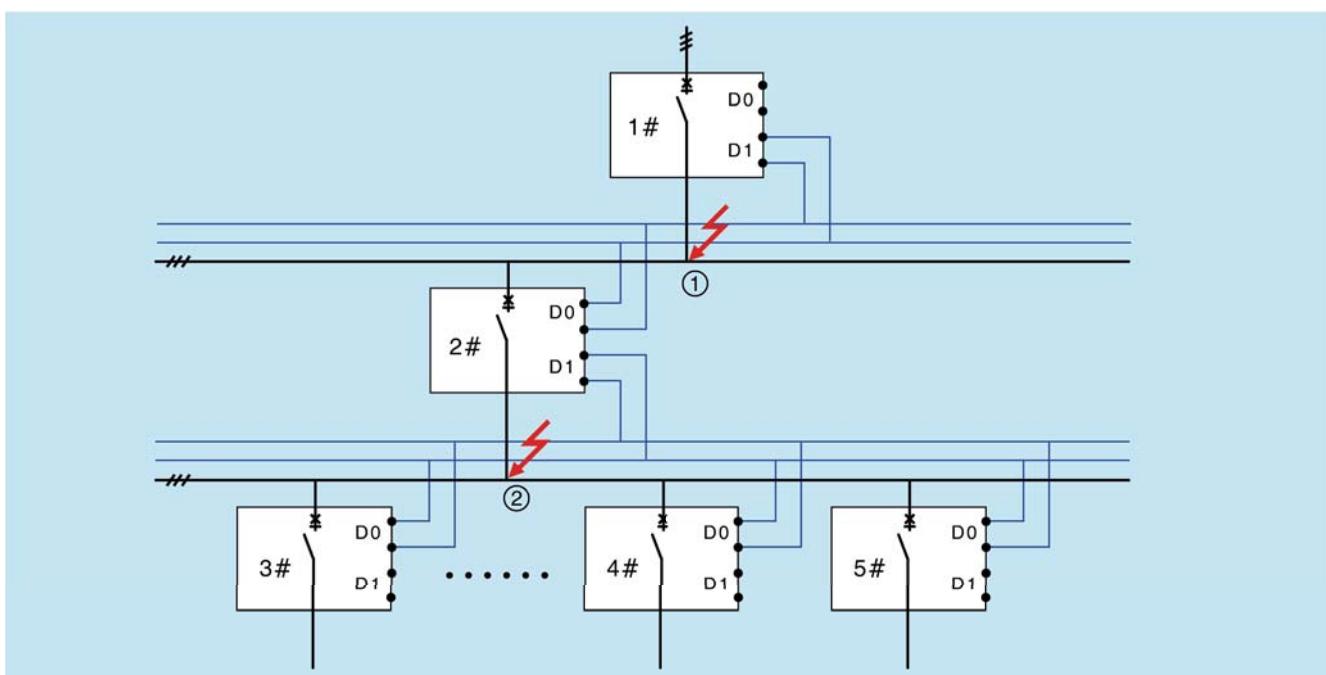

In the same power circuit, zone selective interlocking can be achieved between two or more upstream and downstream circuit breakers. Zone selective interlocking includes short-circuit interlocking and ground interlocking.

1. Interlock function description

- When a short circuit or ground fault occurs at the outgoing side of the downstream circuit breaker (#2~#4) - such as Position ②, the downstream circuit breaker will instantaneously trip and send a zone interlocking signal to the upstream circuit breaker; The upstream circuit breaker (#1) receives the zone interlocking trip signal and delays according to the short circuit or ground protection setting. If the fault current is eliminated during the delay time of the upstream circuit breaker, the protection will return and the upstream circuit breaker will not act; if the fault current is not eliminated after the tripping of the downstream circuit breaker, the upstream circuit breaker will act according to the short-circuit or ground protection setting to switch off the faulty line.
- When a short circuit or ground fault occurs between the upstream circuit breaker (#1) and downstream circuit breaker (#2~#5) -such as Position ①, the upstream circuit breaker will not receive the zone interlocking signal and thus trip instantaneously to quickly cut off the faulty circuit.

2. To set up the I/O ports of the circuit breaker, follow below requirements:

- At least one DI of the upstream circuit breaker is set as zone interlocking detection;
- At least one DO of the downstream circuit breaker is set as zone interlocking signal output

Models to be purchased separately

IZM6 Series Air Circuit Breakers

Intelligent Controller

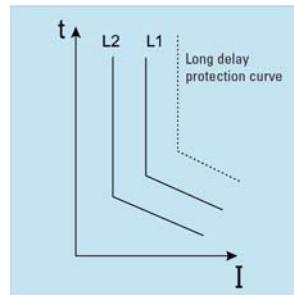

Residual current protection (this function can be extended to PXR6.1P only)

Suitable for protection against residual current faults due to equipment insulation damage or caused by human contact with exposed conductive parts. The residual current action value (I_f) is not subject to the rated current of the circuit breaker. Its signal is taken from an leakage current sensor, with high sampling accuracy and good sensitivity, suitable for small ground current protection.

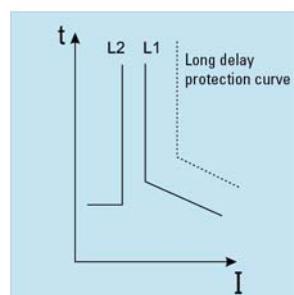

Setting current $I_{\Delta}(A)$	0.5-30A+OFF (step is 0.1A)
Action time $T_{\Delta}(s)$	Instantaneous, 0.06, 0.08, 0.17, 0.25, 0.33, 0.42, 0.5, 0.58, 0.67, 0.75, 0.83
Time accuracy	$\pm 10\%$; inherence: 40ms
Execution mode	Trip / OFF

Notes: The residual current protection cannot be performed together with ground protection function.

Method 2

Current mode action characteristics

Method 1

Method 2

Load monitoring (optional function)¹⁾

1. Execution mode

It is used to monitor less important downstream loads to ensure power supply to the main system. Load monitoring can be used for pre-alarming and controlling branch loads. Two methods are available for action, based on power or current:

Method 1: Independent controlling of two-way loads. When the operating parameter exceeds the set point, the corresponding load monitoring DO delay will act (relevant DO function needs to be set) to control and break the two branch loads, to ensure the power supply to the main system.

Method 2: Generally used to control the loads in the same branch. When the operating parameter exceeds the start value, the Load Monitoring 1 DO delay time will act (pulse mode or level mode for action type) to cut off the branch load; if the operating parameter is lower than the return value after breaking, and at the end of the set delay time, the Load Monitoring 1 DO will return and the Load Monitoring 2 DO will act (by level mode or pulse mode), to switch on the disconnected load and restore the power supply to the system.

2. Current-mode action characteristics:

Two methods are available using current as the operating parameter, with action characteristics shown in the figure below. The action inverse time characteristics, overload, curve speed and action values are independently set. In the case of Current Mode 2, the start value L1 must not be less than L2, and the load recovery delay time is fixed time.

3. Active power mode action characteristics

Two methods are available using the system active power as the operating parameter, with action characteristics shown in the figure below. The action and return delay time are both fixed values. In the case of Power Mode 2, the start value L1 must not be less than L2.

Parameter	Setting range	Setting step	Notes
Load monitoring method	1. Current mode 1	-	
Unload I action set point	Current mode 1/2 Power mode 1/2	0.2-1.0 I_l , 200-1000kW	IA 1kW
Unload I action delay time	Current mode 1/2 Power mode 1/2	20-80% T_r , 10-3600s	1% 1s
Unload II action set point	Current mode 1 Current mode 2 Power mode 1 Power mode 2	0.2-1.0 I_l , 0.2l, -Unload 1 200-1000kW 200-Unload I	IA 2A 1kW 1kW
Unload II action set point	Current mode 1 Current mode 2 Power mode 1/2	20-80% T_r , 10-600s 10-3600s	1% 1s 1s
Protection alarm DO output	Set one DO of the signal unit to Load Monitoring 1 and one to Load Monitoring 2		

Models to be purchase separately

Type	For use with	Part no.
Load monitoring	IZM65/67	IZM6-LMT CAM-50049

Notes: Cannot be mounted separately and need to be purchased together with the basic device.

Notes:¹⁾ The 4DO output module function must be added if the load monitoring function is purchased. See Page 24.

Communication

Four remote functions – including remote measurement, remote signaling, remote adjustment and remote control – can be achieved through a communication-type intelligent controller, to enable real-time monitoring of circuit breaker operations. Take the Communication Network Diagram as an example, through which on-site monitoring and ultra-remote monitoring can be implemented, to get real-time picture of the circuit breaker's operating status and to control it accordingly.

The specific system configuration requirements and communication interface parameters are shown in the following table:

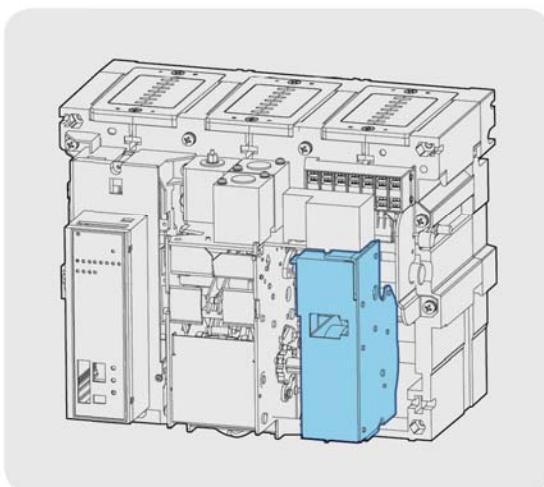

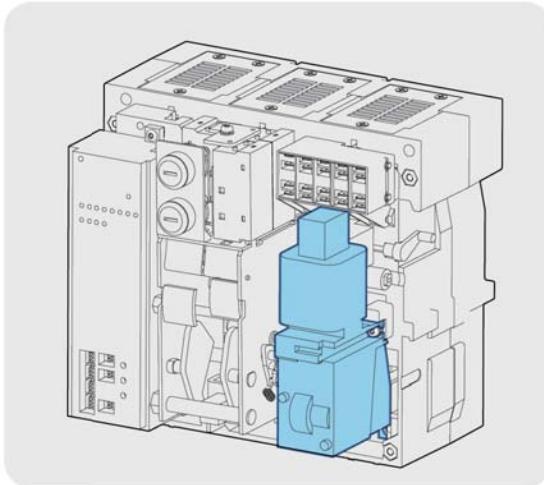

Applicable controller	Controller with optional communication function	
Communication method	RS485 (optical isolation)	
Communication medium	Shielded twisted pair	
Communication distance	1200 m	
Communication protocol	Supplied as standard	Modbus-RTU
Communication convention	PXR Series Intelligent Controller Modbus Communication Protocol V3.0	
Transmission speed (bit/s)	PXR 4.1: 9.6K, 19.2K PXR 6.1: 9.6K, 19.2K, 38.4K, 115.2K	
Communication	1-255 (configurable)	

IZM6 Series Air Circuit Breakers

IZM6 Series Air Circuit Breakers

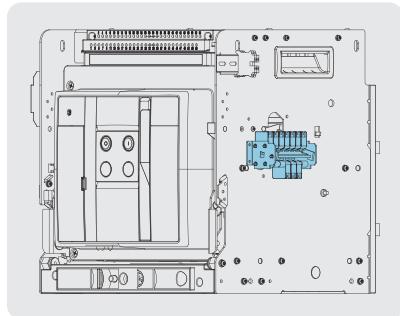

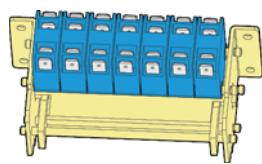

Accessories

Lock

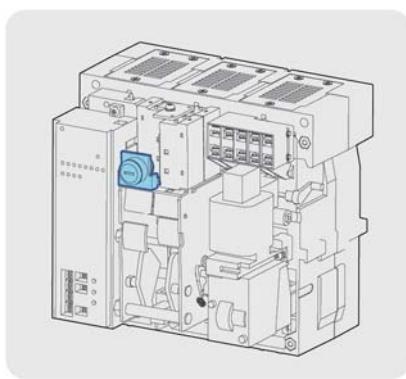

OFF position safety lock

The OFF position safety lock can secure the opening button of the circuit breaker in the depressed position.

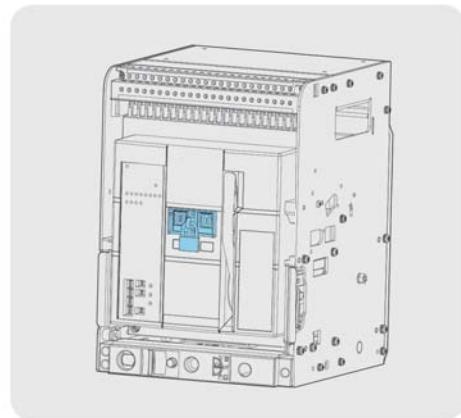

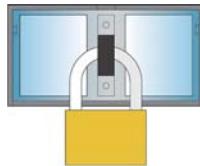

One lock and one key (K1): A circuit breaker is equipped with one lock and one key. The circuit breaker is not allowed to close in the locked state.

Two locks and one key (K2): Two circuit breakers are equipped with two identical locks and one key, and only one circuit breaker is allowed to close.

Three locks and two keys (K3): Three circuit breakers are equipped with three identical locks and two keys, and only two circuit breakers are allowed to close.

ON and OFF position button lock

Models to be purchased separately

For use with	Part no. Article no.
ON and OFF position button lock	IZM65/67 CAM-50028

Notes: Factory mounting is recommended (free of charge). Please specify in the order on which model's basic device the lock is mounted. Eaton's on-site installation service requires additional charge. Please contact Eaton's sales representative for details prior to ordering.

IZM6 Series Air Circuit Breakers

Accessories

Inter-phase partition

The inter-phase partition is mounted vertically between the wiring boards in the fixed section of the drawout circuit breaker, to increase the insulation strength of the busbar connection and prevent the arc from spreading to the inside of the circuit breaker.

Models to be purchased separately

Withdrawable type:

For use with	Part no. Article no.
Interphase partition – 3-pole	IZM6-IB-3 CAM-50029
Interphase partition – 4-pole	IZM6-IB-4 CAM-50030

Fixed type:

For use with	Part no. Article no.
Interphase partition – 3-pole	IZM6-IB-3-F CAM-50118
Interphase partition – 4-pole	IZM6-IB-4-F CAM-50119

Operation counter

Models to be purchased separately

For use with	Part no. Article no.
Operation counter	IZM6-OC CAM-50061

Notes: Cannot be mounted separately and need to be purchased together with the basic device. Undervoltage release, Novoltage release, and Operation counter cannot be assembled at the same time.

Collapsible hand lever

Models to be purchased separately

For use with	Part no. Article no.
Collapsible hand lever	IZM6-67 CAM-50101

Notes: Hand lever is included in D/O breaker.

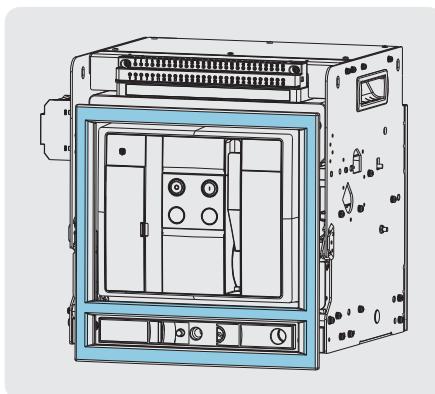

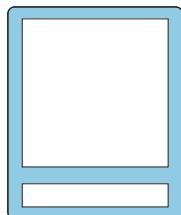

Tester

Models to be purchased separately

For use with	Part no. Article no.
Tester	IZM6-67 CAM-50102

Door escutcheon

The door escutcheon is mounted on the door, and features a protection level up to IP40. The circuit breaker offers an IP20 protection level when mounted separately. Corresponding door escutcheons are available for both fixed and drawout circuit breakers.

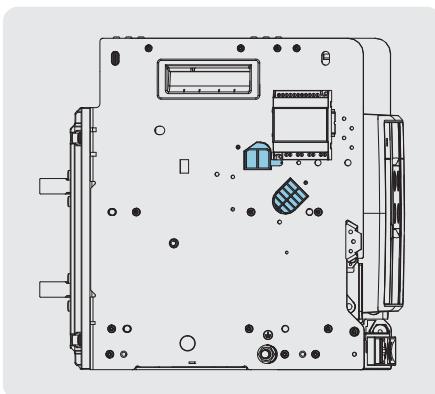

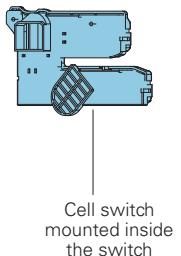

Models to be purchased separately

For use with	Part no. Article no.
Door escutcheon for drawout circuit breaker	IZM6-DEG-W CAM-50031
Door escutcheon for fixed circuit breaker	IZM6-DEG-F CAM-50032

Cell switch

Three sets of contacts are available to indicate the current position of the circuit breaker (Connected, Test, Disconnected). When the circuit breaker is in a certain position, the corresponding contact will be switched on.

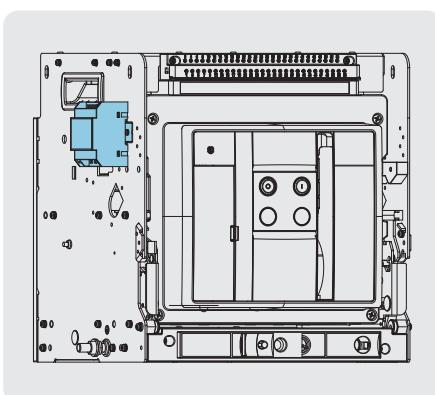

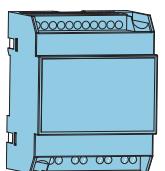

Models to be purchased separately

For use with	Part no. Article no.
Cell switch	IZM6-CS CAM-50033

Power Module

Input power: 65-500V AC or 80-700V DC

An auxiliary power supply must be equipped when the ground protection, communication, or thermal memory function is used or when the circuit breaker is required to maintain input/output signals in the Open state.

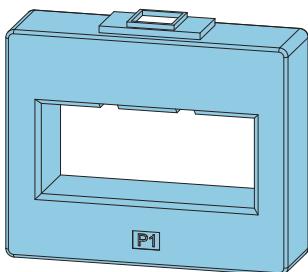

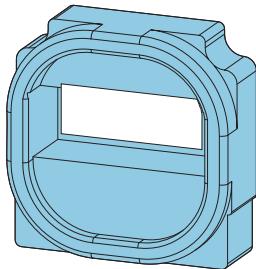

Models to be purchased separately

For use with	Part no. Article no.
External power supply adapter	IZM6-EASY400 CAM-50034

IZM6 Series Air Circuit Breakers

Accessories

Current sensor for neutral conductor

The TN-S power distribution system uses a three-pole circuit breaker, which requires an current sensor for neutral conductor to be equipped with.

The ground-current N-phase transformer only measures the N-phase current for ground protection judgement, with its N-phase transformer mounting direction not subject to the wiring method.

During mounting, be cautious of the following:

1. Twisted-pair wires are available on the current sensor for neutral conductor, with Code No. 23 and 24 on them to connect corresponding secondary terminals. Simply follow the code numbers on the conductors to connect to the secondary terminals.

2. The mounting direction of the current sensor for neutral conductor is subject to the wiring method of the circuit breaker:

For the circuit breaker with upper incoming line, the convex surface of the current sensor for neutral conductor faces the transformer side;

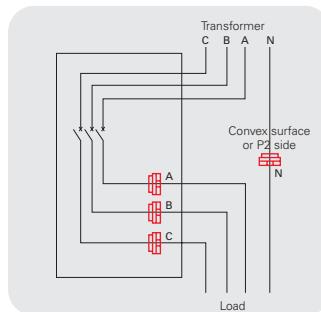

For the circuit breaker with lower incoming line, the plane surface of the current sensor for neutral conductor faces the transformer side;

When the Type IV current sensor for neutral conductor is used:

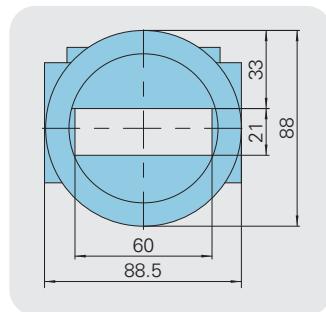

For the circuit breaker with upper incoming line, the P2 side of the current sensor for neutral conductor faces the transformer side;

For the circuit breaker with lower incoming line, the P1 side of the current sensor for neutral conductor faces the transformer side;

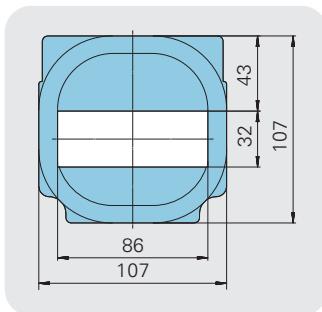

3. Select the transformer model based on the width of N-phase busbar

	IZM65/67	IZM6-CT-III CAM-50037
	IZM65/67	IZM6-CT-IV CAM-50063

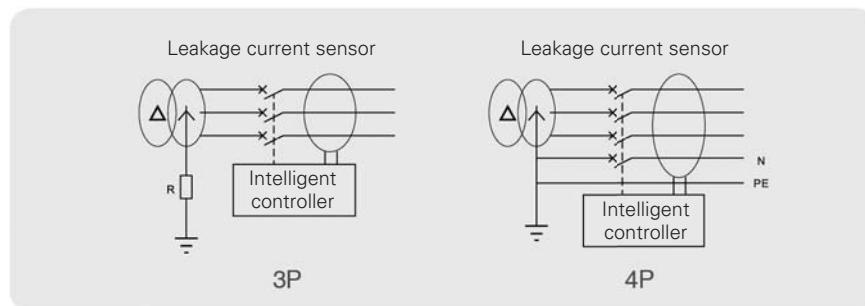

Notes: On-site installation, but can not be ordered separately, need to be ordered together with the circuit-breaker.

Leakage current sensor

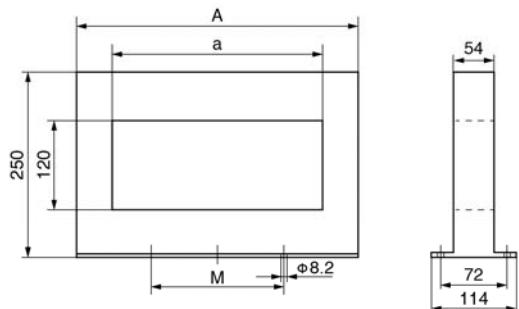

An leakage current sensor is needed when residual current protection is selected, and the controller does not have the ground protection function.

Twisted-pair wires are available on the transformer, with Code No. 6 and 7 to connect corresponding secondary terminals. Simply follow the code numbers on the conductors to connect the secondary terminals.

See below diagram for residual current protection principle.

Dimensions (mm)

	A	M	a
Type I	380	250	285
Type II	465	250	370
Type III	595	350	500

Voltage module	IZM65/67	IZM6-PTM CAM-50071

IZM6 Series Air Circuit Breakers

Power Loss, Temperature Derating and Copper Bar Specification

Power Loss (with ambient temperature of +40°C)

Power loss is the total power consumption measured when the frame rating current I_n passes through the circuit breaker.

Model	Power loss (W)	
	Fixed type	Drawout type
IZM65 2500A frame	356.8	823.4
IZM67 4000A frame	486.7	856.8

Temperature Derating

When the working ambient temperature is higher than +40°C, the continuous current carrying capacity can be corrected with reference to the following table:

Model	Rated current (A)	+40°C	+45°C	+50°C	+55°C	+60°C	+65°C	+70°C
IZM65 2500A frame	400-2000	1	1	1	1	1	1	1
	2500	1	1	1	1	0.99	0.94	0.88
IZM67 4000A frame	2000-2500	1	1	1	1	1	1	1
	3200	1	1	1	0.95	0.92	0.89	0.85
	4000	1	0.95	0.92	0.89	0.85	0.82	0.8

When the altitude is greater than or equal to 2000m, the electrical performance of the circuit breaker can be corrected with reference to the following table:

Altitude (m)	2000	3000	4000	4500	5000
Power frequency withstand voltage (V) 5s	5000	4500	4000	3500	3150
Insulation voltage (V)	1250	1250	1250	1250	1250
Max. operating voltage (V)	IZM65	690	690	690	690
	IZM67	690	690	690	690
Breaking capacity correction	1	0.83	0.77	0.7	0.63
Operating current correction	IZM65	1	1	1	0.97
	IZM67	1	0.93	0.88	0.82

The derating correction factor is only for the maximum current in the frame.

Recommended copper bar specification

Rated current (frame level) I_{nm} (A)	Rated current I_n (A)	Recommended copper bar specification		
		Number	Horizontal outgoing	Vertical outgoing
IZM65 2500A frame	400	2	/	80 × 5
	630	2	/	80 × 5
	800	2	/	80 × 5
	1000	2	/	80 × 5
	1250	3	/	80 × 5
	1600	2	/	80 × 10
	2000	3	/	80 × 10
	2500	4	/	80 × 10
IZM67 4000A frame	2000	3	2	100 × 5
	2500	2	2	100 × 10
	3200	3	3	100 × 10
	4000	5	4	100 × 10

The copper bar specifications used in the table are when the circuit breaker is at the ambient temperature of up to 40 °C and installed in an open area, in accordance with the conventional thermal conditions in GB14048.2.

IZM6 Series Air Circuit Breakers

Power Loss, Temperature Derating and Copper Bar Specification

The intelligent controller is set as follows, if without special requirements from users

Overload long delay time protection	I_r	I_n

Ordering Description

Devices supplied as standard:

Drawout circuit breaker's basic device, cassette, shunt coil (220V AC), closing coil (220V AC), motor operator (220V AC), auxiliary contact (4NO4NC), PXR6.1 intelligent trip unit, Overcurrent trip switches OTS (1CO), door escutcheon, wiring terminal, 220V AC to DC24V power module, safety shutter, arc distinguishing cover, and handle.

PXR6.1A trip unit supplied as standard – Current mode (LCD), drawout type

Ordering Description

Devices supplied as standard:

Drawout circuit breaker's basic device, cassette, shunt coil (220V AC), closing coil (220V AC), motor operator (220V AC), auxiliary contact (4NO4NC), PXR6.1 intelligent trip unit, Overcurrent trip switches OTS (1CO), door escutcheon, wiring terminal, 220V AC to DC24V power module, safety shutter, arc distinguishing cover, and handle.

PXR6.1E trip unit supplied as standard – Current-voltage mode (LCD), drawout type

Devices supplied as standard:

Fixed circuit breaker's basic device, shunt coil (220V AC), closing coil (220V AC), motor operator (220V AC), auxiliary contact (4NO4NC), PXR6.1 intelligent trip unit, Overcurrent trip switches OTS (1CO), door escutcheon, wiring terminal, 220V AC to DC24V power module, arc distinguishing cover, and handle.

PXR6.1P trip unit supplied as standard – Power mode (LCD), fixed type

Devices supplied as standard:

Fixed circuit breaker's basic device, shunt coil (220V AC), closing coil (220V AC), motor operator (220V AC), auxiliary contact (4NO4NC), PXR6.1 intelligent trip unit, Overcurrent trip switches OTS (1CO), door escutcheon, wiring terminal, 220V AC to DC24V power module, arc distinguishing cover, and handle.

PXR6.1P trip unit supplied as standard – Power mode (LCD), fixed type

IZM6 Series Air Circuit Breakers

Ordering Description

Devices supplied as standard:

Drawout circuit breaker's basic device, cassette, shunt coil (220V AC), closing coil (220V AC), motor operator (220V AC), auxiliary contact (4NO4NC), PXR4.1 intelligent trip unit, Overcurrent trip switches OTS (1CO), door escutcheon, wiring terminal, 220V AC to DC24V power module, safety shutter, arc distinguishing cover, and handle.

PXR4.1A trip unit supplied as standard – Current mode (LED), drawout type

IZM6 Series Air Circuit Breakers

Ordering Description

Devices supplied as standard:

Fixed circuit breaker's basic device, shunt coil (220V AC), closing coil (220V AC), motor operator (220V AC), auxiliary contact (4NO4NC), PXR4.1 intelligent trip unit, Overcurrent trip switches OTS (1CO), door escutcheon, wiring terminal, 220V AC to DC24V power module, arc distinguishing cover, and handle.

PXR4.1A trip unit supplied as standard – Current mode (LED), fixed type

Devices supplied as standard:

Fixed circuit breaker's basic device, shunt coil (220V AC), closing coil (220V AC), motor operator (220V AC), auxiliary contact (4NO4NC), PXR4.1 intelligent trip unit, Overcurrent trip switches OTS (1CO), door escutcheon, wiring terminal, 220V AC to DC24V power module, arc distinguishing cover, and handle.

PXR4.1A trip unit supplied as standard – Current mode (LED), fixed type

IZM6 Series Air Circuit Breakers

Ordering Description

Devices supplied as standard:

Drawout circuit breaker's basic device, cassette, shunt coil (220V AC), closing coil (220V AC), motor operator (220V AC), auxiliary contact (4NO4NC), door escutcheon, wiring terminal, safety shutter, arc distinguishing cover, and handle.

Switch disconnector devices supplied as standard, drawout type

Eaton is an intelligent power management company dedicated to improving the quality of life and protecting the environment for people everywhere. We are guided by our commitment to do business right, to operate sustainably and to help our customers manage power – today and well into the future. By capitalizing on the global growth trends of electrification and digitalization, we're accelerating the planet's transition to renewable energy, helping to solve the world's most urgent power management challenges, and doing what's best for our stakeholders and all of society.

Eaton was founded in 1911 and has been listed on the New York Stock Exchange since 1923. We reported revenues of \$20.8 billion in 2022 and serve customers in more than 170 countries. Eaton entered the Chinese market in 1993 and has grown significantly since then. In 2004, Eaton moved its Asia-Pacific headquarters from Hong Kong to Shanghai. Today, Eaton has nearly 9,000 employees and 20 manufacturing facilities in China. Eaton is marking its 100th anniversary of being listed on the New York Stock Exchange, and its 30th anniversary of being in Chinese market.
