

## The next generation XC100: Maximum functionality with a minimal footprint

The XC-104 modular PLC is a fast solution for simple automation tasks.

The next generation of the XC100 series from Eaton's XControl™ portfolio can be used to efficiently implement small PLC and control functions with Ethernet-based networking. The modular PLC can be expanded with up to six snap-on XN300 I/O modules.

### The optimal entry-level solution for the PLC world

The XC-104 comes with an 100 MBit/s Ethernet interface which enables networking with higher system levels. For standardized data transmission in machine-to-machine communication the device features an OPC-UA server. In addition, the Eaton Embedded Linux platform with real-time expansion and the CODESYS run-time form the core of the product's software.

The control unit can be easily assembled by adding up to six snap-on XN300 I/O modules, thus enabling flexible system configuration.
