

Automatic Power Transfer Devices

MATS PC Dual Source Automatic Transfer Switch MATSN Series

EATON

Powering Business Worldwide

Energizing a world that demands more.

We deliver:

- **Electrical solutions** that use less energy, improve power reliability and make the places we live and work safer and more comfortable
- **Hydraulic and electrical solutions** that enable machines to deliver more productivity without wasting power
- **Aerospace solutions** that make aircraft lighter, safer and less costly to operate, and help airports operate more efficiently
- **Vehicle drivetrain and powertrain solutions** that deliver more power to cars, trucks and buses, while reducing fuel consumption and emissions

MATSN Series Dual Source Automatic Transfer Switches

General Features

General Features

Standards

- GB 14048.1 General
- GB/T 14048.11 Transfer Switching Equipment
- IEC 60947-1 General
- IEC 60947-6-1 Transfer Switching Equipment

Certifications

- CCC certification
- CB certification

Equipment Class

- PC class dedicated transferring switch equipment, excitation drive

Operating Conditions

- -10 to 55°C for operation
- ≤95% for relative humidity of the air when the maximum temperature is +55°C
- -15 to 65°C for storage
- ≤2000m for altitude height

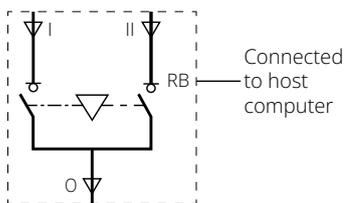

Pollution Level

- Operate in Pollution Level III environments

Utilization Category

- AC-33B/AC-33iB/AC-33iA (CCC)
- AC-33B (CB)

Design Legends

In the design legends:

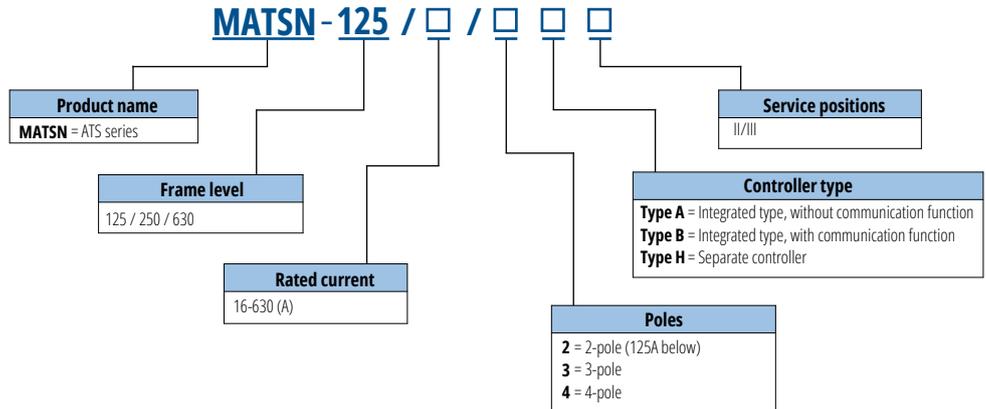

- “I”: Source I input end
- “II”: Source II input end
- “O”: Power source output end
- “RB”: RS485 communication interface

Product Selection

MATSN series

MATSN Series Type Selection Description

Controller Types

Type A Controllers

Fire work interlocking function:

- In the event that the fire work interlocking signal contact is closed, both power sources will enter into the Open states, and the dual-source Open state output contacts will be closed. If the fire work interlocking signal contact is opened, both sources can be switched back from the Open state by re-powering on, or performing an Automatic-Manual-Automatic transfer operation.
- The fire work interlocking signal is a passive contact signal.

Note: The fire work interlocking function is not available for II-position products.

Generator start/stop function:

- By default, Line 1 is Source 1 (S1); the self-generated power is connected to II, which is identified as Source II (SII) by default. Connect the generator starting power (DC24V) to the corresponding terminal of the terminal block on the side, and connect the generator starting terminal on the dual source device to the generator starting device. In case of S1 source faults, the dual source device sends a signal to start the generator, and automatically transfer back to the self-generated power when it's normal. The device will automatically transfer back to the S1 source when it recovers.
- Passive digital signal outputs, with the terminal capacity of AC 220V and 1A.

Position feedback:

- The device is equipped with Source I position, Source II position and dual-source Open position feedback contacts, to provide passive digital signal output indication when the switch is in different positions.

Note: Dual-source Open position feedback function is not available for II-position products.

Operating mode selection function:

- Supports on-site selection of the operating modes including automatically transfer and restore operation, automatically transfer and nonautomatically restore operation, mutual-backup operation, and utility-generator modes.

Type B Controllers

Equipped with all the functions offered by Type A controllers, and additional communication function:

- RS485 interface, with Modbus communication protocol.
- Enables remote communication, remote measurement, remote adjustment, and remote control.

Type H Controllers

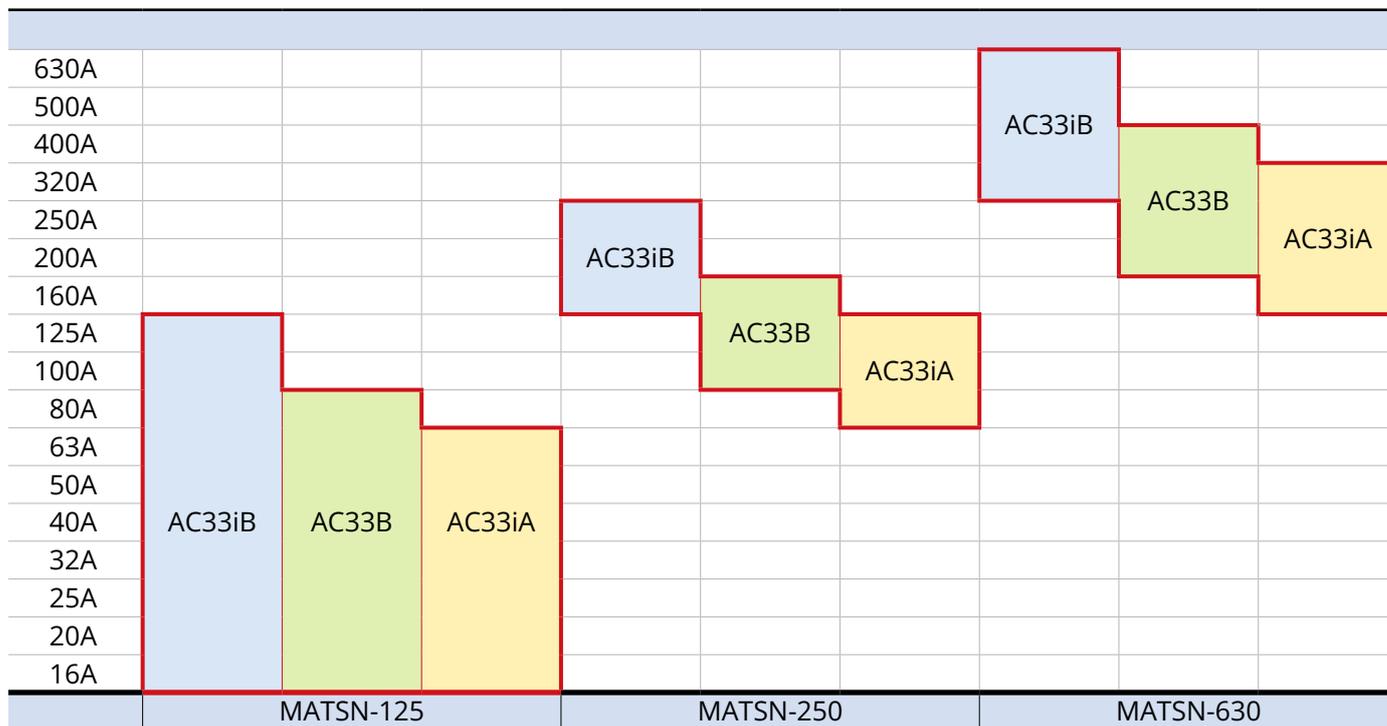

Separate mounting, equipped with all the functions offered by Type B controllers, and added functions, including:

- Fault alarm.
- In the event of dual-source faults, the system outputs a set of alarm signals (passive NO contact outputs, with contact capacity of AC220V and 1A).
- Load shredding.
- Support non-standard customization per user request.
- The split controller cable is configured with 1.5 meters as standard.

Note: The difference between the under voltage recovery value and under voltage action value, and the difference between the over voltage action value and over voltage recovery value must both exceed 15V, otherwise the setting is invalid. Both over voltage and under voltage ranges are adjustable for Type B controllers via communication only, and Type H via both local operations and communication.

Controller Display Functions

1 Manual Operation Section, including an operating handle, to perform a manual closing operation of Line I/II sources according to user selections.

Note: Remove the operating handle after completing the manual closing operation, and put it back to its original place.

2 Manual Opening Button (Only position III)

3 Position selection toggle: Three levels are available for selection, corresponding to Automatic operation, Manual SI and Manual SII. After the manual position is selected, the manual closing operation can be performed through subsequent operations in the Manual Operation Section

4 Power Source Status Feedback Indication

5 Function Setting Section

Includes test function, reset function, operating mode setting, delay time setting, and communication setting (from left to right).

Test function:

The Test function can be used to check whether the product can be switched normally after powered up. Make sure to put the switch in the automatic operating status and Source I in closed position, under the condition that Source I is normal.

Press the Test button, and the switch will complete an Ion-O-Ilon-O-Ion operation cycle.

Reset function:

Reset button: Press the Reset button, and the controller will reset the restart procedure. After trouble shooting, press the Reset button to enter into a new round of signal detection and judgement.

Parameter settings:

Operating mode setting		Delay time setting				
1	2	Operating mode	3	4	5	Delay time
OFF	OFF	Automatically transfer and restore operation	OFF	OFF	OFF	0
ON	OFF	Automatically transfer and nonautomatically restore operation	ON	OFF	OFF	2

Type H Separate Controller

Key Operation Description

Key functions:

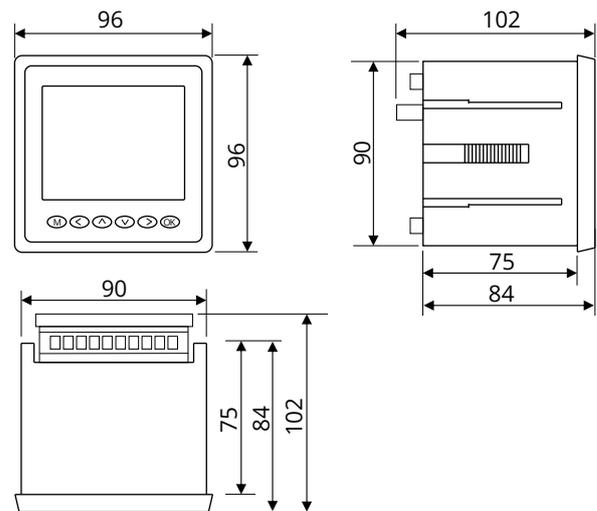

- Ⓜ Menu key: Enter or exit from the Setup Interface. On the Menu Interface, press it to return to the previous menu.
- ⏪ Left key: Select the previous data bit or move the cursor left
- ⏩ Up key: Increase the data at the cursor bit by one or move the cursor up
- ⏴ Down key: Decrease the data at the cursor bit by one or move the cursor down
- ⏴ Right key: Select the next data bit or move the cursor right
- Ⓚ OK key: Confirm and enter the interface, or save and enter the next interface

Key combinations and functions:

Menu item selection operation: Press ⏩ and ⏴ to select menu items. Then press Ⓚ to enter the corresponding menu item interface.

Parameter editing operation: Press ⏪ and ⏴ to select the digit you want to edit. Then, press ⏩ and ⏴ to modify the numeric data of the selected digit bit. Press Ⓚ to save the data, and enter the next menu. If the Ⓜ key is pressed, discard changes and return to the previous menu.

Outline Dimensions and Mounting

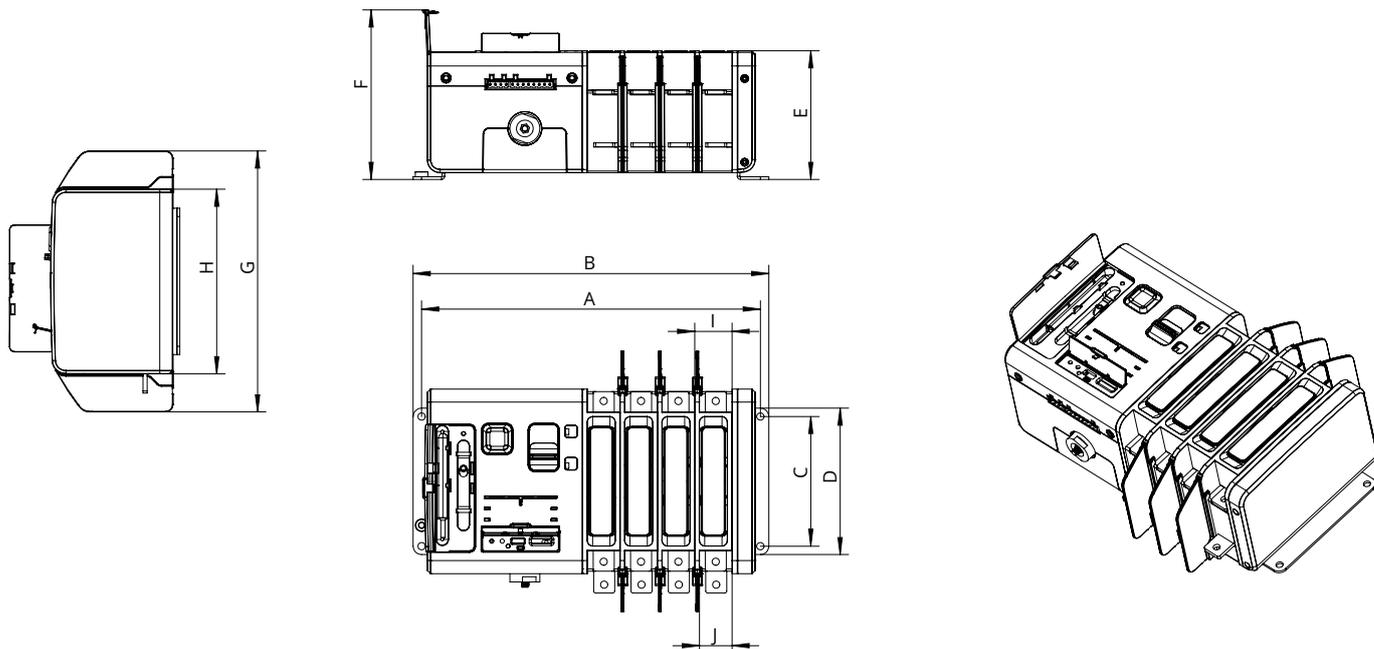

Cut out a square hole of 92x92mm on the mounting panel, and put the Type H controller in from the front. Then, fasten it from the back of the panel with a locking slider, which requires no additional fixing structures and fasteners.

Eaton is an intelligent power management company dedicated to protecting the environment and improving the quality of life for people everywhere. We make products for the data center, utility, industrial, commercial, machine building, residential, aerospace and mobility markets. We are guided by our commitment to do business right, to operate sustainably and to help our customers manage power- today and well into the future. By capitalizing on the global growth trends of electrification and digitalization, we're accelerating the planet's transition to renewable energy sources, helping to solve the world's most urgent power management challenges, and building a more sustainable society for people today and generations to come.

Eaton was founded in 1911 and has been listed on the New York Stock Exchange for more than a century. We reported revenues of \$23.2 billion in 2023 and serve customers in more than 160 countries. Eaton entered the Chinese market in 1993 and has grown significantly since then. In 2004, Eaton moved its Asia-Pacific headquarters from Hong Kong to Shanghai. Today, Eaton has nearly 8,000 employees and 19 manufacturing facilities in China.
