

Elevate data center power distribution with busway

Outside data center Non-segregated phase bus

Greater reliability

Provides greater reliability than power cables, increases uptime and reduces risk of power failures.

Higher voltage capability

Requires less space and materials to distribute power at a higher voltage from utility to white space and increases energy consumption efficiency through lower energy loss.

Grey space Sandwich-style busway Pow-R-Way III

Flexible and modular

Enables data centers to scale and accommodate growth opportunities swiftly, simply and cost-effectively.

Operational efficiency

Monitors trends, breaker health, load management and provides preventive maintenance reminders.

White space Track-style busway PowerWave 2

Overhead system

Optimizes space and accessibility making it easier to modify compared to cable and conduit.

Branch circuit monitoring technology

Monitors energy consumption through accurate high-speed monitoring at the individual server rack.

Future-proof solution

Provides flexibility to support increased power demands as data centers add or replace server racks.
