

Eaton's next-generation enclosure

Easier to install  
than ever before:  
**the new EMC2**

xEnergy Basic EMC[2]

**EATON**

*Powering Business Worldwide*

## A flexible enclosure to suit your every need

With the xEnergy Basic EMC2 series, we're launching a new enclosure platform for power distribution with Class II protection to complement our existing Class I offering. It combines the modularity of the established Eaton EP assembly system with novel, user-friendly features, making it even more flexible and functional.

Flexible sizes and dimensions

## Many sizes to choose from

In addition to a wide range of widths and depths, we also offer flexible, modular setups. Combine and arrange the components as you like!

Setup 1

Setup 2

Virtually unlimited combinations

# Just a formula?

## xEnergy Basic EMC[2]

EMC2 stands for 'EP Modular Class 2' and thus recalls the formula at the heart of Einstein's most famous theory. While we're not redefining the relationship between energy and mass, **the new enclosures offer plenty of room for your power distribution** needs, thanks to generous flange openings and reduced external dimensions, without compromising on the space available inside.

xEnergy

'xEnergy' is the trade name for our various energy distribution solutions

Basic EMC[2]

'Basic' is the product family name and acts as a sub-category within the xEnergy family

'EM' stands for 'EP modular' solutions

EM

C[2]

'C[2]' stands for 'Class II' protection

# Wide range of flanges

- Large flange openings
- Compatible with all Eaton F3A flanges
- New two-component, push-through flange plates
- Enclosure depth of 270 mm

## Even more **blue** cable-entry options

In addition to large flange openings at the top and bottom that are compatible with our comprehensive range of F3A flanges, we're launching new two-component flange plates. As a result, you have even more options for convenient cable entry at your disposal. We have also carefully selected the enclosure depth of 270 mm to match both the available flange openings and our EP assembly system, thereby making it even easier to wire your distribution boards.

### Assembly made easy, thanks to the new frame design

- Fully compatible with EP system components
- Sections can be preconfigured outside the distribution board
- Tool-free snap-in technology
- Significant time savings

# New, streamlined enclosure design

## An even smaller footprint

We have specially adapted the door design to this new enclosure series. The doors are located on the outside and feature visible, symmetrical hinges, which swing a full 180 degrees and can be opened from the left or right. This has allowed us to reduce the external footprint of the enclosures, without compromising on the space available inside, effectively reducing the height and width by 50 mm. With the new external door, there is no gap between door and enclosure, for an improved overall appearance. And thanks in part to the seamless foamed gasket, the enclosures come with an IP55 rating.

No gap between door and enclosure improves appearance and reduces footprint

External doors with a swing of 180 degrees

Foamed gasket supports IP55 rating

Door can be opened from the left **and/or** right

## A rugged enclosure that keeps out dust and water spray

All models of the new series come with a high degree of protection as standard (IP55), making them suitable for a broad range of applications, including industrial power distribution. Moreover, the enclosures also comply fully with IP2XC for enhanced personnel protection when the door is open and the protection covers are closed. Like all our enclosures, the EMC2 series is rugged by design and offers the highest possible mechanical impact rating (IK10).

## High ingress and impact protection

- Degree of protection: IP55 (IP2XC with open door and closed protection covers)
- Mechanical impact rating: IK10
- Suitable for use in industrial power distribution

## Greater simplicity and ease of installation

All models can be wall-mounted or used as floor-standing enclosures. They are equipped with special provisions in the side panels to ensure that they can be quickly and easily bayed. Due to the flexible design, the busbars can be routed through bayed enclosures without any adverse impact on the protective insulation. When used as floor-standing distribution boards, the enclosures are additionally secured from the outside by means of wall-mounting brackets to prevent unintentional tilting. We also offer plinths with a height of 100 mm, which can be combined or used individually, and additional cable-entry knockouts are available at the rear (in the plastic sections at the top and bottom).

Swing handle as standard, compatible with half-cylinder locks

## Doors with three-point lock and swing handle

Doors with ideal contact pressure

Multipoint lock in all models

Snap-in function for easier preconfiguration

### Highly secure locking mechanism as standard

A three-point locking mechanism is standard across the entire product range, from the smallest wall-mounted enclosure to the largest floor-standing version. As a result, the doors have exactly the right contact pressure and thus contribute significantly to the series' IP55 rating. In addition, all models come with a swing handle that is compatible with any standard half-cylinder lock.

### Even more flexible assembly options

The new EMC2 enclosure series is **fully compatible with our existing EP system components**. What sets it apart from the other enclosures of our xEnergy Basic product family is the new interior frame design, which allows individual fields or entire sections to be preconfigured and prewired outside the distribution board. The inserts can then be placed at the bottom of the distribution board and secured in place at the top by means of novel snap fasteners, without any tools. Thanks to this practical and effective snap-in functionality, the inserts can be pre-assembled, which reduces the time required for installation and generates additional productivity gains.

**Eaton is an intelligent power management company dedicated to improving the quality of life and protecting the environment for people everywhere.** We are guided by our commitment to do business right, to operate sustainably and to help our customers manage power – today and well into the future. By capitalizing on the global growth trends of electrification and digitalization, we're accelerating the planet's transition to renewable energy, helping to solve the world's most urgent power management challenges, and doing what's best for our stakeholders and all of society.

Founded in 1911, Eaton is marking its 100<sup>th</sup> anniversary of being listed on the New York Stock Exchange. We reported revenues of \$20.8 billion in 2022 and serve customers in more than 170 countries. For more information, visit [www.eaton.com/EMC2](http://www.eaton.com/EMC2).
