

Marina Power and Lighting

Marina Distribution Panels

Provide reliable power distribution to your marina

Eaton's Marina Panels provide a free-standing power distribution solution in a space saving design. Choose from a wide variety of power configurations to match your system requirements.

Benefits

- **Versatile panels** provide optional ground fault monitoring for NEC 555 compliance and surge suppression
- **Rugged exteriors** are NEMA® Type 3RX, 316L stainless steel
- **Power distribution** is available in multiple service voltage and ampacity ratings

Standard features

General

- Copper or aluminum bus available
- Bolt-on breakers
- All internal wiring is fine-stranded, 1000 V insulated copper
- UL® Listed for safe power

Power configurations

- 120/240 V single-phase, 120/208 V three-phase, 277/480 V three-phase or 220Y/127 V three-phase voltage ratings available
- Available with feeder breaker ground fault monitoring
- Available with main lug only or main breaker up to 1200 A
- Branch circuit breakers available from 20 to 1200 A
- Available with surge suppression

Versatile design

- Custom-engineered configurations available
- Powder coated marine white
