

KEY-RAS

The KEY-RAS is designed to work with the i-on range control panels.

The keypad allows users to set and unset the system. The KEY-RAS, in two-way mode, will also provide entry, exit and alarm tones.

At a glance...

- Four LEDs show the setting status of partitions or levels
- “A, B, C, D and Unset” keys provide quick setting and unsetting of the system
- A built in proximity tag detector
- Built in panic button enabled in programming
- Option of two-way mode, which works with the COMPACT and STYLE panels to provide audible feedback on setting and unsetting
- One-way mode for use with older i-on panels and expandable panels. This provides an arming station to set or unset
- Option of battery or external 12V power supply
