

Completed HD Packaging.  
Ramp sold separately.

# Enclosure Heavy-duty Packaging

For situations where an extra level of enclosure protection is required, Eaton is pleased to announce new Heavy-duty Packaging options (HD Packaging) for use with Paramount and VS2 Enclosures. The HD option is comprised of a shock pallet with high density foam, a bracket to anchor the enclosure to the pallet, bracing material for the enclosure and all associated packaging material.

Use of the HD Packaging also permits re-shipment of an enclosure storing up to 2,000 lbs. of equipment and travelling up to 6,000 miles. HD Packaging is recommended for clients who ship enclosures to a third-party integrator and then the integrator ships the populated cabinet to its final destination.

When specifying HD Packaging, an HD ramp is available to facilitate the unloading process. The ramp is re-useable so you do not need to order one per enclosure. For shipments going to multiple locations, it is suggested that a ramp be ordered for each destination.

## HD PACKAGING OPTIONS

Item Number	Description
HDPKGUPCHARGE24	Heavy-duty Packaging for 24" enclosures. Includes pallet, anchor bracket, bracing and hardware.
HDPKGUPCHARGE30	Heavy-duty Packaging for 30" enclosures. Includes pallet, anchor bracket, bracing and hardware
ENCRMP3784	Ramp

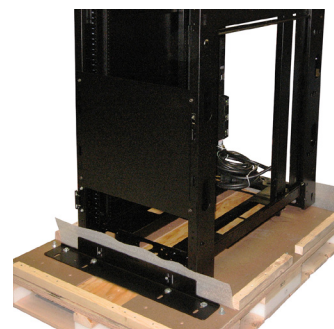

## Benefits of using Heavy-duty Packaging

- Allows integrators to populate an enclosure and safely ship it to another location.
- Integrator does not need to provide additional packaging material as it is all re-useable.
- Ease of equipment installation – there is no need to remove the enclosure from the pallet. Integrators simply populate the rack, reinstall the enclosure bracing and corner protection packaging material and wrap the enclosure for re-shipment.

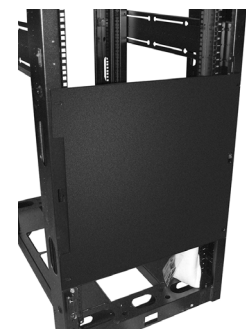

## Technical Notes

All standard Paramount and VS2 frames can be used with the HD Packaging option. When the HD option is selected, the enclosure will ship with bracing material installed (via screws) across the front and rear of the cabinet. This material will need to be removed prior to populating the rack then re-installed prior to shipping the populated rack. Failure to re-install the bracing could result in damage to the enclosure or equipment. Once the enclosure reaches its final destination, the bracing material is removed and can be discarded.

We cannot ship HD Packaging for an enclosure that originally shipped with standard packaging. All requests for HD Packaging must be made at the time of quoting.

Enclosure bolted to pallet.
