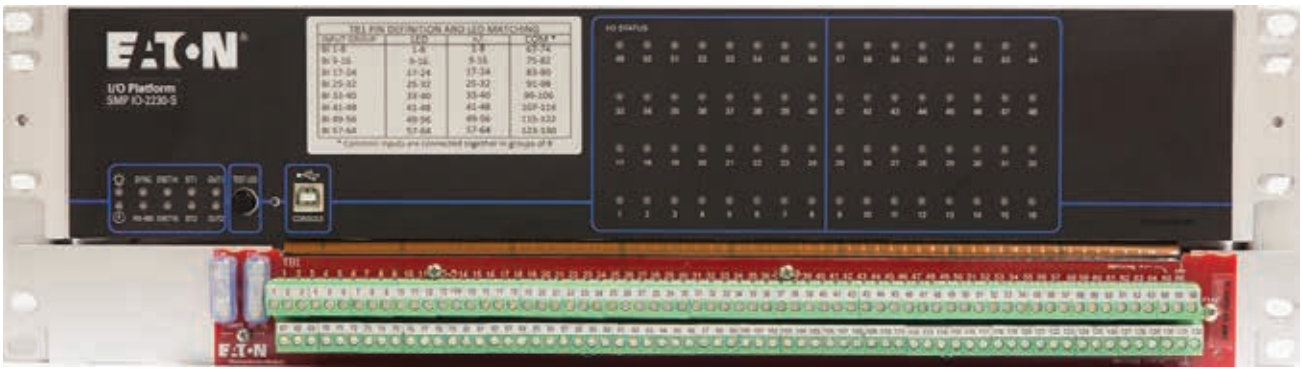
RTU replacement solution
The SMP™ IO-2230-S status and alarm input system



Powering Business Worldwide

Description

This document describes the hardware layout and functionality of the SMP IO-2230-S system, which is based on the SMP IO-2230 distributed I/O platform.

RTU replacement solution

Eaton's RTU replacement solution provides utilities with a cost-effective answer to upgrading legacy RTUs with cybersecurity as a priority. Based on the utility hardened and proven Eaton's SMP family of substation automation products, the SMP SG-42xx automation platform and the new SMP IO-2230 distributed I/O unit, the basic hardware agnostic replacement solution, supports most legacy RTU configurations. Eaton's RTU replacement solution is easily adaptable to any specific RTU deployment scenario (e.g. GE D20) and allows for great cost savings on field installation man-hours and service interruptions because it keeps the existing field wiring.

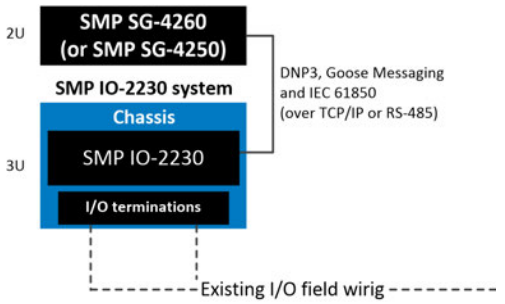


Figure 1. Eaton's RTU replacement solution

Figure 2. The SMP IO-2230-S unit

SMP Gateway automation platform

Both of Eaton's SMP Gateway automation platform models are substation-grade gateways with a proven history in data acquisition and distribution automation applications, as protocol conversion device and integration solution for secure IED remote access. They are recognized as one of the most efficient and reliable automation platforms on the market and are perfect for distributed automation.

SMP IO-2230 distributed I/O platform

The SMP IO-2230 is Eaton's new generation of substation-grade distributed I/O platforms; it is specially designed to meet modern industry and utility requirements and is fully integrated with the SMP Manager and Tools application for device configuration and maintenance. It integrates seamlessly with the SMP Gateway automation platforms–simplifying both system setup and commissioning.

The SMP IO-2230 distributed I/O platform uses a template-driven configuration tool, SMP Config, and includes numerous cybersecurity features to help utilities meet their compliance requirements, including NERC CIP (certified under UL 2900-2-2).

General features

Hardware

- Form factor: 3U rackmount
- SMP IO-2230 is servicable without removing the chassis form the rack
- Individual LEDs for each I/O
- No moving part
- Two built-in Form C relays for system alarm (configurable)
- System status LEDs
- Multi-function button
- Front USB 2.0 maintenance port (Type B)
- Custom length cables available
- Supported polarity reversal for power supply and Inputs/Outputs

Protocols

- DNP3, IEC 61850, GOOSE Serial or TCP/IP links
- DNP3 event queue (up to 1000 events/slave)
- Up to 5 slave instances

Communication and Web interface

- RS-485 serial interface
- 2 x 10/100 Mb/s Ethernet ports or 2 x 100 Mb/s optical Ethernet ports
- Daisy chain Ethernet capabilities
- Web interface for I/O commissioning
- Secured remote maintenance using transparent connection (SMP Gateway and IMS passthrough)

Software

- Linux®-based operating system
- Seamless integration with the SMP Gateway
- Access to SMP Manager's Tools
- Remote management (firmware upgrade, setting changes, license update)
- Configuration with SMP Config (also for standalone units), multi protocols/instances, configurable point mapping
- Offline and template-driven configuration
- Use of SMP Stats, SMP Log and SMP Trace
- Micro PLC for local programmable logic (fast and complete PLC functions)
- Ready for remote management via Enterprise Management Software (IMS)
- System alarms

Mapping

- Predefined mappings
- Configurable mappings
- Serial number, version, internal status, current time, last reset time and more are available in the protocol mapping
- Exportable DNP3 protocol device XML profile

System

- Integrated self-diagnostics
- Integrated watchdog timer
- Real-time clock (with battery backup)
- Internal clock synchronization using IRIG-B, NTP or via protocols
- Local/Remote state (logical points)
- Logs support (Security, System)

Cybersecurity

- UL2900-2-2 compliant: Standard for Software Cybersecurity for Network-Connectable Devices
- IEEE 1686-2013 compliant
- Integrated Ethernet firewall
- Ability to disable any unused port (report enabled-disabled ports)
- Secure maintenance connection (TLS) via SMP Gateway Passthrough or via direct SMP Manager connection
- AES-128/256 encryption
- Secure USB maintenance port
- Secure command shell
- Access management (log, lockup, etc.)
- Account management:
  - Strong passwords
  - Single Admin account
  - User accounts and user groups
  - Detailed group permissions
- All system components digitally signed
- Settings integrity validation
- Factory reset in case of Admin password loss

Benefits

With its robust and scalable design Eaton's RTU replacement solution is flexible and adapts to evolving automation requirements.

Reliability

- Designed to evolve through regular software and firmware updates, ensuring a future-proof automation system
- Helps meet NERC CIP requirements by securing IED remote access and enhancing SCADA communication links

Scalability

- Universal power supply (wide input ac and dc voltage range), for connection flexibility
- Use of open industry protocols (standard DNP3, GOOSE messaging or IEC 61850 over a TCP/IP or RS-485 link) with over 80 protocols to integrate other IEDs in the substation via the automation platform

Easy integration

- Complete support for the SMP Tools
- Easy configuration using SMP Manager's SMP Config
- Simplified pre-loading operation of existing configuration into the SMP Gateway prior to installation

Productivity

- 70% labor cost reduction compared to a traditional RTU replacement solution due to the use of existing wiring
- Offline configuration tools
- Web interface for I/O commissioning
- Uses the same management applications as the SMP Gateway automation platform (SMP Manager)
- Seamless I/O integration between the SMP Gateway and distributed I/O unit
- Enhanced automation capabilities using the IEC 61131-3 Soft PLC of the SMP Gateway automation platform and/or the micro PLC of the SMP IO-2230 distributed I/O unit

System architecture and I/O features

The following I/O features are available for the RTU replacement systems, I/Os types availability depends on the specific model.

Analog inputs

- High/Low warning support
- Deadband, scaling and units
- User calibration at fixed ambient temperature

Binary outputs

- Output protection against single component failure
- Trip/close pair, latch, pulse, pulse pair support
- Persisted operation counter/operation time
- Binary points software polarity reversal
- Control queuing allows up to 10 parallel requests, sequentially processed when the same point is targeted

Binary inputs

- AC and DC inputs
- Tolerance/Intolerance filtering
- Chatter protection
- Fail safe circuit (active level in normal state)
- Binary points software polarity reversal
- Timetag at the beginning or end of the filtering (setting)
- Persisted counters (total transitions, up/down direction), with deadband, scaling and roll over detection.
- Freeze, clear, freeze and clear counters support

Table 1. RTU replacement system, available models

Type	Model	Available I/Os
Rackmount (3U)	SMP IO-2230-A	32 analog inputs: disconnect terminations
Rackmount (3U)	SMP IO-2230-K	32 control outputs: disconnect terminations (K) or DB25 connectors (KR)
Rackmount (3U)	SMP IO-2230-S	64 status and alarm inputs: disconnect terminations

The SMP IO-2230-S configuration is fixed at 64 status and alarm inputs, the following features apply to this SMP IO-2230 system:

- An event is generated for each change of state of the status and alarm input that gets through debouncing (tolerance/intolerance filter), the current state of the input is available
- Counts on rising and falling edges of status and alarm inputs as well as for the total number of detected transitions on each input
- All binary input changes are reported in the order they occurred with accurate timetag
- Each status and alarm input is photo-coupled
- Wetting for status and alarm inputs is protected by a 2 A fuse, on both side of the wetting

Front panel

This section shows the SMP IO-2230 system front panel and identifies its main components.

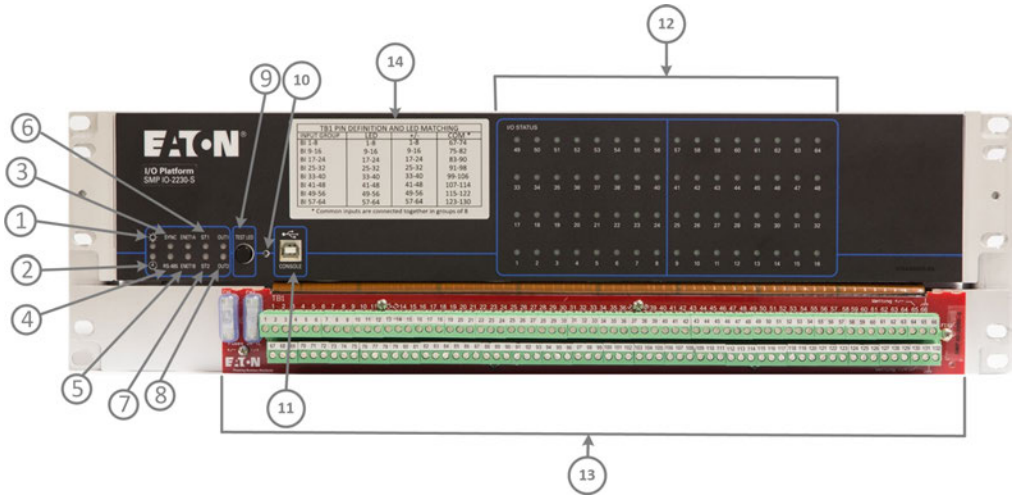

Figure 3. The front panel of the SMP IO-2230-S unit

The following table describes the front panel components related to the previous figure:

Table 2. Front panel components of the SMP IO-2230-S unit

ID	Name	Description
1		Power LED. This LED indicates the status of the SMP IO-2230 system internal power supply.
2		Watchdog timer status LED.
3	SYNC	Clock synchronization LED. This LED indicates the synchronization status of the SMP IO-2230 system connected to an IRIG-B synchronization source.
4	RS-485	Built-in RS-485 serial port activity LED.
5	ENET1A, ENET1B	Built-in ENET1A and ENET1B2 port activity LEDs. The two Ethernet ports are used as Ethernet switches for daisy-chain connections. Each LED indicates the speed and activity level of the corresponding Ethernet port (switch).
6	ST1	Status LED 1. This LED indicates the various steps the SMP IO-2230 system goes through during the startup sequence.
7	ST2	Reserved for future use.

<table>
<tr><th>ID</th><th>Name</th><th>Description</th></tr>
<tr><td>8</td><td>OUT1, OUT2</td><td>On board relay 1 and relay 2
Each LED indicates the relay status.

Table 3. On board relays LED, color description
<table><tr><th>Color</th><th>Meaning</th></tr><tr><td>Off</td><td>The relay is not energized</td></tr><tr><td>Green</td><td>The relay is energized</td></tr></table></td></tr>
<tr><td>9</td><td>TEST LED</td><td>Multi-function button used:
• To test the SMP IO-2230 system front panel LEDs. When pressed, all LEDs should light.
• To force the system to boot into rescue mode. To do so, press and hold the button during the first five (5) seconds of the boot-up sequence, until the LEDs light up. The SMP IO-2230-S will then boot in rescue mode.</td></tr>
<tr><td>10</td><td>Reset Button (pinhole)</td><td>This reset button requires the use of a pin to activate the reset of the SMP IO-2230 system. This is necessary in order to prevent accidental use to the button.</td></tr>
<tr><td>11</td><td>CONSOLE</td><td>Type-B USB 2.0 port.
This port is used for maintenance and configuration of the SMP IO-2230 system; it is always enabled. This port is also used to access the SMP IO-2230 system's web interface to monitor and control I/Os for commissioning.</td></tr>
<tr><td>12</td><td>I/O Status
LEDs 1 to 64</td><td>I/O activity/state for status inputs 1 to 64.
Each LED indicates the input status of the point.</td></tr>
<tr><td>13</td><td>Terminal blocks and fuses</td><td>Terminal blocks, compression type for up to 64 status inputs. The connectors are used to connect the existing field wiring to the SMP IO-2230-S. When configured in wetting mode, 2 x 2 A fuses are protecting both sides of the wetting circuit.</td></tr>
<tr><td>14</td><td>Label for terminations versus LED identification</td><td>Label for Terminal Block 1 (TB1) pin matching according to LED IDs for SMP IO-2230-S. The 64 status and alarm inputs are organized in eight groups of eight electrically isolated inputs with a common return for each group. Each input is bipolar and photo-coupled. Each group is configurable for group common or contact wetting.</td></tr>
</table>

Rear panel

This section shows the SMP IO-2230 system rear panel and identifies its main components.

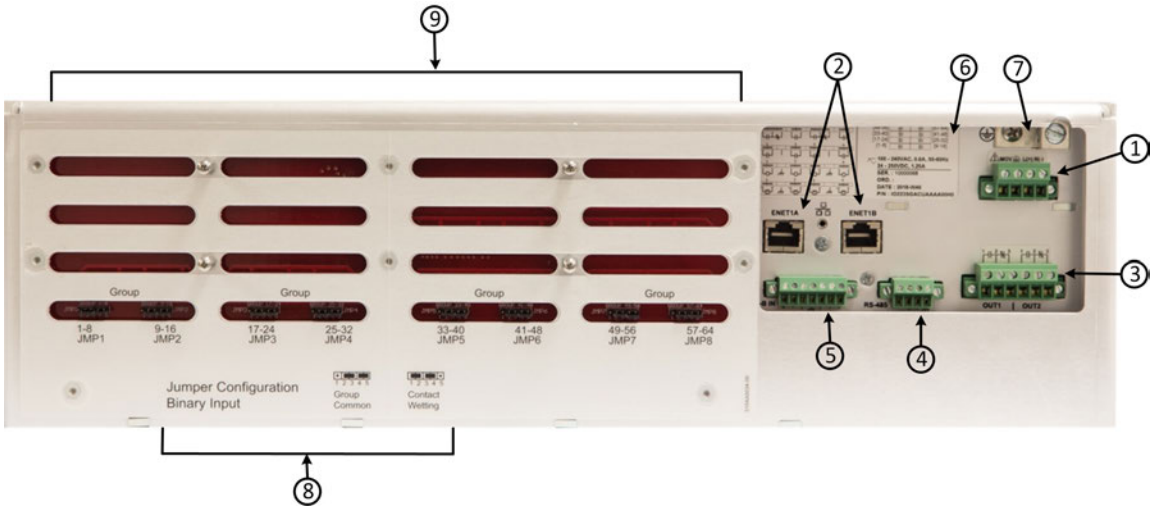

Figure 4. The rear panel of the SMP IO-2230-S unit

The following table describes the rear panel components related to the previous figure.

Table 4. Rear panel components of the SMP IO-2230-S unit

ID	Name	Description
1	Power supply terminal block	Wiring terminals for power supply. Eaton recommends the use of a shielded cable with twisted 18 to 12 AWG wires for the SMP IO-2230 system power supply terminal block. **Note:** If the SMP IO-2230 system is intended for use at ambient temperatures greater than 140°F (60°C), use a cable with a suitable temperature rating. Recommended torque for this terminal block is 0.49 N*m (4.3 lbf*in).
2	ENET1A, ENET1B	Built-in Ethernet connectors (switch). The following connector types are available for these built-in ports (both connectors are of the same type): • Shielded metallic RJ45 (standard) • Fiber-optic LC (option)
3	OUT1, OUT2	2 NO/NC (normally open / normally closed) Form C relays: The OUT1 relay's NC contact is pre-configured for system health monitoring (application). Both relays are available for system applications and can be activated through a system data output point, if configured. When configured for system health monitoring, the OUT1 relay's NC contact operates as follows: The relay's NC contact remains closed until the SMP IO-2230 system is started. Thereafter, the contact is opened if the SMP IO-2230 system is working properly. In case of failure, the watchdog timer resets the SMP IO-2230 system and the NC contact closes during the restart. Eaton recommends the use of a shielded cable with twisted 28-14 AWG wires for this terminal block. Recommended torque for this terminal block is 0.25 N*m (2.2 lbf*in).

ID	Name	Description
4	RS-485 serial port	Terminal block reserved for the serial RS-485 communication (COM1) • 2-wire RS-485 support (multidrop) • Up to 1200 m (4000 ft.) • Up to 32 devices (multidrop) Baud rates supported on this port: 300, 600, 1200, 1800, 2400, 4800, 9600, 19200, 38400, 57600, 115200 bps
5	IRIG-B IN	Terminal block reserved for the reception of a demodulated IRIG-B signal. Eaton recommends the use of a shielded cable with twisted 22-16 AWG wires for the IRIG-B terminal block. Recommended torque for this terminal block is 0.25 N*m (2.2 lbf*in).
6	System configuration	When Eaton delivers an SMP IO-2230 system, an I/O configuration sticker is placed on the rear panel.
7	Grounding screw	Screw-in protective earth ground connection terminal. Eaton recommends the use of 14-2 AWG wires for the protective earth ground screw.
8	Jumpers configuration	Identification for the jumper configuration used to set group common or contact wetting for the status and alarm inputs. Each group of eight inputs is associated to a port and a jumper configuration number (Group at the rear of the device); the jumper can be setup according to the desired configuration (e.g. JMP1 is for status and alarm inputs 1 to 8).
9	Jumper configuration area	The binary inputs can be configured, in groups of 8 inputs, for group common or contact wetting. **Note:** A protective plexiglass is normally covering the entire jumper configuration area. The plexiglass was removed for the picture to avoid reflection.

Note: Conformal coating is available upon request.

Specifications

Table 5. General specifications

General specifications		
	Details	**Additional information**
Dimensions	Height: 5.52 in. (140 mm) Width: 19 in. (482 mm) Length: 9.75 in. (248 mm) 15 lb max (6.8 kg)	
Warranty	10-year limited	
Operating temperature	-40°F to +185°F* (-40°C to 85°C) Typical use	* Safety marking is based on temperature derating table
Storage temperature	-40°F to +185°F (-40°C to 85°C)	
Humidity	5 to 95%, non-condensing	
Degrees of protection provided by enclosure	IP30 (applicable on the SMP IO-2230 device only)	IEC60529: 2013
MTBF	Real MTBF (practical): > 100 years	The MTBF value is obtained from the ratio of the number of devices in operation over the actual number of failures observed on devices of the same SMP family.
Maximum altitude	Up to 6561.7 feet (2000 meters)	
Status LED display	Power Watchdog Clock synchronization (SYNC) Build-in serial port (RS-485) Build-in Ethernet ports (ENET1A, ENET1B) Status (ST1, ST2) Relay state (OUT1, OUT2) I/Os activity/state (1-64)	
Internal Battery	Lifetime: > 20 years (Rechargeable lithium battery)	Not serviceable Battery autonomy > 20 days Battery charging time < 24 hrs

Table 6. Power supply specifications

Universal Power Supply		
Specifications		
Rated supply voltage	100 – 240 VAC / 24 – 250 VDC	
Input voltage range	88 – 264 VAC / 19.2 – 287.5 VDC	
Frequency range	50 / 60 Hz	
Inrush current	40A at 28 VDC (t<1 ms) 110A at 125 VDC (t<1 ms) 160A at 120 VAC (t<1 ms)	
Power consumption	30W (max)	100 – 240 VAC, 0.6A 24 – 250 VDC, 1.25A
Dielectric	2000 Vrms	
Terminal block power	4-pin	
Wire size	12 – 30 AWG solid wire 12 – 30 AWG stranded wire	Jumper MOV are installed at the factory on power supply's terminal block connectors (pin 1-2)
Wire screw	max torque 4 lbf-in (0.44 N-m)	
Internal fuses	2 x 3.15A TL fuses	Not serviceable
External fuses	2 x 2A	Located on the front panel of the chassis, next to the terminal blocks. The fuses are used for the wetting mode.
Ground lug	External ground lug on rear panel	
Wire size	14 – 2 AWG	
Protection	300 VAC/385 VDC, 60J Differential MOV Protection 300 VAC/385 VDC, 60J Common MOV Protection by external jumper placed on terminal block connectors (pin 1-2)	The SMP IO-2230 system requires the MOV protection to be installed to be compliant with product standards. The SMP IO-2230 system is shipped with the MOV already installed on the power supply terminal block (pin 1-2).

Table 12. Binary inputs

Binary inputs (status and alarm inputs)		
Voltage range	selectable by software	
	24 – 48 (± 19.2 to ± 60) VDC	On: ±19.2 – 60 VDC, Off: ± 7 VDC
	24 – 48 (± 19.2 to ± 60) VAC 50/60 Hz ± 5 Hz	On: 15 – 60 VAC, Off: 5 VAC
	110 – 125 VDC	On: ±88 – 150 VDC, Off: ±18 VDC
	110 – 250 (±91 to ± 300) VDC	Coming soon, contact Eaton for information
	100 – 240 (±88 to ± 288) VAC 50/60Hz ± 5 Hz	Coming soon, contact Eaton for information
Current draw at nominal		
	24 – 48 VDC	2.5 – 5.4 mA, 0.26W maximum
	24 – 48 VAC	2.6 – 5.5 mA, 0.26W maximum
	110 – 125 VDC	2.5 – 2.9 mA, 0.36 W maximum
	100 – 120 VAC	2.3 – 2.8 mA, 0.33W maximum
Sampling rate	500 µs	
Debouncer delay	Software configurable up to 127 ms	No hardware filter

Binary inputs (status and alarm inputs)		
Protection	1000 Vrms dielectric 300 VAC / 385 VDC, 60J differential MOV protection	All BI to earth.
Terminal block binary input		
Wire size	12 – 30 AWG	
Wire screw	maximum torque 4 lbf-in (0.44 N-m)	
External fuses	External DC voltage supply +/- fuses, 2 x 2 A TL fuses	Serviceable (accessible on the front of the device)

Certifications and compliancy notes

The SMP IO-2230 platform, which is inserted into the chassis, is substation-grade and comply to several standards, refer to the SMP IO-2230 platform Catalog Data (CA912004EN) for details. The chassis itself did not undergo tests for substation-grade compliancy.

Temperature derating

Several configurations are possible, so Eaton provides a Microsoft Excel™ calculator tool in order to enable our customers to easily calculate the total power in the device as well as the operational maximum temperature allowed, according to a specificSMP IO-2230-S configuration. The calculator tool can be downloaded from Eaton's Web site, (**Resources** page of the SMP IO-2230 distributed I/O platform).

Following is a capture taken from the tool for a typical SMP IO-2230-S configuration. The blue fields correspond to values entered or selected by the customer and the grey fields on the right side of the table contain the calculated results.

To be compliant with the IEC 61010-1 certification, the SMP IO-2230-S can be used within the temperature range that is function of the total power dissipated in the unit, as per the result of the table or in the Microsoft Excel™ calculator tool. According to the standard, the SMP IO-2230-S can support operating temperatures between -40 °C and +70 °C.

SMP IO-2230 temperature derating calculator

Description	Configuration	Power dissipation (W)
Main Supply Voltage SMPIO	48V	1.15

P-CABC-0316-0003	Multimode Fiber OM1 62.5/125um LC-LC 3m
P-CABC-0316-0001	Multimode Fiber OM1 62.5/125um LC-LC 1m
P-CABC-0316-xxxx	Multimode Fiber OM1 62.5/125um LC-LC xm
Ethernet RJ45 Shielded cable	
P-CABC-0310-025	Copper Ethernet Cable RJ45 CAT6 25m
P-CABC-0310-010	Copper Ethernet Cable RJ45 CAT6 10m
P-CABC-0310-03	Copper Ethernet Cable RJ45 CAT6 3m
P-CABC-0310-01	Copper Ethernet Cable RJ45 CAT6 1m
P-CABC-0310-xxx	Copper Ethernet Cable RJ45 CAT6 xm
DB9 Serial Shielded Cable	
RS-485 2-wires + IRIG-B, shielded cable, DB9 to Wires	
P-CABC-0309-0010	RS485 2-wires Serial Cable DB9M to Wire 10m
P-CABC-0309-0003	RS485 2-wires Serial Cable DB9M to Wire 3m
P-CABC-0309-0001	RS485 2-wires Serial Cable DB9M to Wire 1m
P-CABC-0309-xxxx	RS485 2-wires Serial Cable DB9M to Wire xm
Time Synchronization Shielded Cable	
4 Twisted Pairs Shielded cable: Irig-B; RS-485 4-Wires/2-Wires Wire-Wire	
P-CABC-0320-25	4 Twisted Pairs Cable Wire-Wire 25 m
P-CABC-0320-10	4 Twisted Pairs Cable Wire-Wire 10 m
P-CABC-0320-03	4 Twisted Pairs Cable Wire-Wire 3 m
P-CABC-0320-01	4 Twisted Pairs Cable Wire-Wire 1 m
P-CABC-0320-xx	4 Twisted Pairs Cable Wire-Wire xm

Some cables can be provided with custom lengths, according to customer request. For a custom length-cable, use the required length to create your own cable code.

Contact your Eaton representative to validate the maximum length for your application. Example: a cable P-CABC-0310-xxx with 2 meters length will be P-CABC-0310-002 (always use length in meters). Contact Eaton for other cable requirements.
